USDA NRCS Natural Resources Conservation Service

December 2005

Low or Very Low WIN-PST Rating

Conservation Activity Job Sheet *(NJPest01)*

Participant _____ Crop Year_____

Achieve a low or very low WIN-PST rating on the farm by using pesticides with a low risk of leaching or runoff; or use biological pesticides or other non-chemical control methods on 100% of all crops.

Pesticides have different chemical properties relating to leaching, runoff and toxicity. Soils have different physical properties that relate to water movement. Combining pesticide with soil characteristics results in a relative risk assessment to humans or fish.

To determine which pesticides are acceptable there must be a WIN/PST run tailored to field location, soils and management system.

Crop Grown	Field #s	Acres	Pesticide	Date Applied

Documentation Required: **Attach WIN/PST printout.**

I certify that I have accurately reported the pesticides used on my farm as per the attached WIN-PST printout, and that the rating is low or very low.
