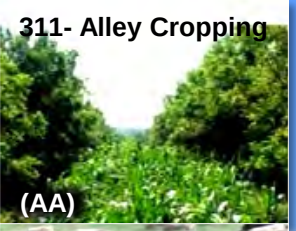
Soil Health System Guide for Irrigated Cropland in NM

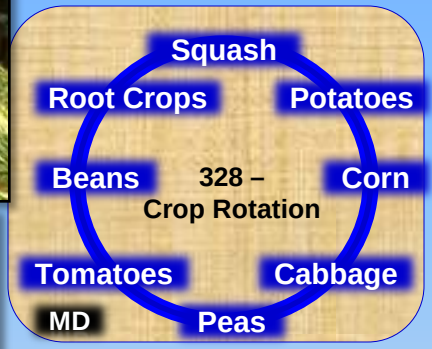
Transitioning to a Soil Health System will take time, experience, patience & a paradigm shift in our thinking.

In NM, much work needs to be done on cover crops & No-till.



Implement a Soil Health System to address resource concerns

Soil Health = a steep learning curve



i.e. water source, drought, etc.

As Applicable, select Irrigation System

energy

economics

Biodiversity with minimal (min.) soil disturbance drives Soil Health.
