Conservation Practice Standard Overview

Contour Orchard and other Fruit Areas (331)
The Contour Orchard and Other Fruit Areas Conservation Practice Standard calls for planting orchards, vineyards, or other perennial crops on or near the contour.

Practice Information
This practice is used when orchards, vineyards, or other perennial crops are established on sloping land. Planting on the contour conserves and protects soil, water, and related natural resources.

Conservation benefits may include but are not limited to:
- reduced soil erosion
- reduced transport of sediment and other associated contaminants
- increased Infiltration

The practice also benefits equipment operation and improves aesthetics.

Planting orchards and fruit areas on the contour generally requires the construction of a bench or terrace to provide access to the growing trees or shrubs.

Common Associated Practices
Contour Orchard and Other Fruit Areas (331) is commonly applied with practices such as Access Road (560), Diversion (362), Grassed Waterway (412), Underground Outlet (620), and Conservation Cover (327).
