Leader: [Holli Kuykendall](#)

For several years, NRCS, Conservation District, TSPs, and NGO staff have used excellent computer programs designed to assist conservation planners develop a conservation and grazing management plan. New computer programs come out almost annually these days, but what about the data these planners enter into these programs? This webinar will examine the essential principles that should go into a grazing management plan so participants will understand how to put accurate data “in” so that we get a good plan “out” for the livestock producer. Attendees may want to have their calculators handy when viewing this webinar.
