Maine State Supplement 2012-1
ENR01 Fuel Use Reduction for Field Operations

For this Enhancement, you must run both “before” and “after” scenarios in RUSLE2 to demonstrate that new management system utilizes 20% or less fuel than the current operations. Choose one of the RUSLE2 templates that include Fuel Usage. From the dropdown, “Fuel Type for Entire Run”, choose the fuel that is being used (generally diesel). If you are interested in having an accurate fuel cost as well, click on the red fuel pump at the upper toolbar, and enter the current price for the fuel.
