

Toolkit Status Code Definitions

Toolkit Workflow Flags

New - This is the default status for a newly-created plan. The plan has no land units or practices.

Pending Approval – This is a new plan and has not been approved by the customer. A plan can be set to this status at anytime approval or signature from the landowner is required.

Completed - All scheduled activity against this plan has been completed, and at least one practice has been applied.

**Pending Review* - A plan submitted by a Technical Service Provider (TSP), partner, or by an NRCS employee, that requires review by an NRCS official.

**Pending Correction* - A submitted plan that was reviewed by an NRCS official, and requires further work before resubmission.

**Approved* - There are no pending actions required against this plan, and the service date is populated indicating the plan is signed/approved. This also indicates approval of the plan submitted by a TSP.

Non Selected - Plans created as alternatives, scratch work, or that have been abandoned due to land ownership changes or other reasons. These will probably be assigned a status of archived.

Unknown – No determination can be made according to the accepted business rules. This flag will be used upon an automatic sweep being implemented, but probably will not be used during normal Toolkit activity.

Toolkit Archive Flags

Active – Plan is in the process of practices being applied, or the plan has been completed.

Archived - An archived plan will be moved to the archived database. It may be retrieved at any time, and either reinstated to active status or used as a template for a new plan.

**Corresponds with the Conservation Transaction Plug-In application*
