

SQL04 Maine State Supplement 2012-1
Use of Cover Crop Mixes

Criteria number 3 specifies that the crop following the cover crop will be planted using no-till method.

Choose from the following Cover Crop Mixes:

1. 42 pounds per acre (#/ac) Cereal Rye, 19 pounds per acre (#/ac) Hairy Vetch
2. 30pounds per acre (#/ac) Cereal Rye, 25 pound per acre (#/ac) Hairy Vetch, 10 pounds per acre (#/ac) Crimson Clover
3. 13 pounds per acre (#/ac) Forage Radish, 48 pounds per acre (#/ac) Cereal Rye (for best results with radish, plant no later than Sept 1, earlier in central and northern Maine)
4. 56 pounds per acre (#/ac) Cereal Rye, 6 pounds per acre (#/ac) Crimson, Red, or Yellow Sweet Clover

Other suitable mixtures are allowable. Including a tillage radish in the mix will help to break up compaction.
