

Cultural Resources in Alabama

Classification of Effects to Cultural Resources

The following list of practices indicates the potential for effects as they relate to cultural resources ([General Manual : Title 420 - Social Sciences Part 401.60-62](#)). The abbreviation “G” indicates ground disturbing; “PG” indicates potentially ground disturbing; and, “NG” indicates non-ground disturbing. Some practices listed as PG have alternative types of construction involved that require specific decisions as to their effect on cultural resources; in such instances the classification would be determined on a case by case basis. Although some practices may not be literally “ground disturbing”, the implementation or construction of that practice may effect a cultural resource and thus may be considered G or PG (i.e., prescribed burn, fish stream improvement and fencing). Management practices generally are considered NG, however, any activity or practice that could result in any effect (no effect, no adverse effect, adverse effect or beneficial effect) to a cultural resource is considered an undertaking regardless of its status relative to the classification listed below.
