

## **Michigan Supplemental Enhancement Activity**

### **Soil Erosion Enhancement Activity – SOE02 – Protection of cultural resources**

Site eligibility will be determined prior to scheduling this enhancement for CSP. The local NRCS office will work with the Cultural Resources Coordinator (CRC) to determine if the proposed site meets one of the four criteria identified in the National Enhancement Sheet (SOE02).

Once it has been determined that the proposed site meets one of the four criteria listed in SOE02, the site will be protected from further degradation by re-vegetating the area using the NRCS Conservation Cover (327) standard in the eFOTG.

Native species will be used to enhance fish and wildlife habitat, including pollinator habitat.
