

Information Required for Adding Field(s) to Approved Nutrient Management Plans (NMP)

The following items must be submitted to DENR to add field(s) to your approved NMP. The field(s) cannot be used for manure application until DENR approves the field(s) to be included in your NMP.

A. A clear **Aerial Photograph / Field Map** for each field (may be obtained from the local FSA office)

- Clearly outline / highlight boundary of each field
- Outline and / or crosshatch all excluded areas within each field:
 - Well setbacks (this includes private and public wells for domestic or livestock use and irrigation wells)
 - Buffer zones next to a lake, river, stream, or a conveyance to surface water (i.e. any natural or manmade drainage, open tile intake structures or other conduits to surface water, etc.)
- Label each field with a Field or ID # (i.e. Tract & Field #) - when assigning field numbers consider continuing from the list in the existing NMP to avoid assigning the same field identification to more than one field

W 1/2 of the SE 1/4 of Section 25, Township 104 North, Range 52 West, Yankton County, SD (Note: A field summary list should be included if three or more fields are being added)

B. **Field Ownership & Manure Application Agreements:** DENR has an example agreement to use. Submit original copy to DENR.

C. **Estimated Water Erosion Soil Loss value** (determined using **RUSLE Equation**) - include RUSLE calculation sheet

D. **Soil Test Result (Phosphorous)** - include soil sample test results record

E. **(CPA-7) Updated Three Year Initial Nutrient Management Plan** spreadsheets OR identification of the **current crop** and the **predicted three year crop rotation** for each field

If you have questions about adding fields to your nutrient management plan or if you have general questions pertaining to manure management, please contact Kent Woodmansey at (605) 773-3351.
