

## Trimble Access-Navigating through sub-menus

This document outlines the process of navigating through the sub-menus of Trimble Access. This navigation is a great alternative to closing the current menu, or “X” out. It keeps the current menu open in the background, for quick access. You can think of this as your shortcuts.

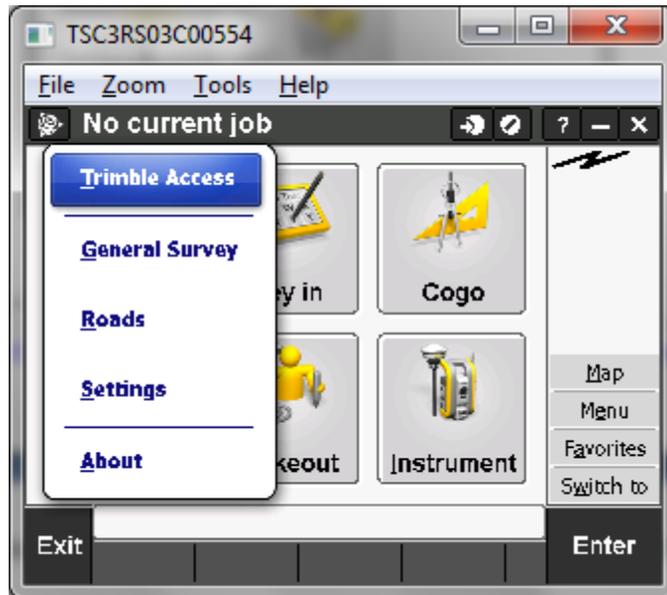

From the main Trimble Access screen, select the Trimble icon or hit the Trimble icon key on controller. You’ll notice there’s no options besides Trimble Access.

Once you select a menu item, it now shows up in the selection. If you were to close or “X” from this screen, the Settings would be removed from this navigation box.

Below is the result after several main menus have been added

Below is the result with main menus and sub-menus
