

DRAFT

Coastal Zone Soil Survey of Little Narragansett Bay Connecticut & Rhode Island

Presence of Sulfidic Materials

 Sulfidic Materials
  Not Rated

These soils contain sulfidic materials in the soil profile. If drained or dredged and exposed to air, sulfides will oxidize and create acid sulfate drainage causing serious environmental damage.

Areas of sulfidic materials mapped as water may exist outside of the Coastal Zone Soil Survey of Little Narragansett Bay and on the Soil Survey of Connecticut and Soil Survey of Rhode Island. This map does not replace the need for an on-site soil investigation.
