Sinkhole Treatment B: Soil Cover

Procedure:
1. Remove any rocks, debris, or other materials.
2. Excavate the sinkhole to the specified depth.
3. Install a reinforcement layer if necessary.
4. Install a layer of filter material.
5. Install a layer of soil.
6. Install a layer of gravel or stone.

Notes:
- Ensure the materials are properly disposed of and transported.
- Follow local regulations for waste disposal.
- Use appropriate equipment for excavation and transportation.
- Monitor the project for any potential risks or issues.

Materials:
- Soil
- Gravel or stone
- Filter material
