

Pacific Islands Area – Toolkit Hints & Tips

3. “Zoom To Layer” vs. “Zoom to Plan”

Ever used the “Zoom to Layer” option in Toolkit

and received this error message?

- o ArcMap closes when “Zoom to Layer” is used on a Personal Geo database Layer (PGDB) layer.
 - In other words, when “Zoom to Layer” is used on the ‘consplan’ layer, a message like the one above will appear and the ArcMap session will automatically close.

3. “Zoom To Layer” vs. “Zoom to Plan”

FIX:

Toolkit Support advises use of the “**Zoom to Plan**” button located on the Toolkit Toolbar.

- To prevent this error, users should **ALWAYS** use the “**Zoom to Plan**” button located on the Toolkit Toolbar whenever a layer is created from one of the buttons on the Toolkit Toolbar.

In general, any layer generated by using a feature from the Toolkit Toolbar, should be accessed by a Toolkit element.
