

## Navigating to Waypoints with Garmin GPSMap 76 Units

### **Abstract**

This guide outlines the steps for navigating to waypoints with a Garmin GPSMap 76 GPS unit.

*Steps: Acquire Satellites – Press Nav – Select Go To Point – Select Waypoints – Choose a point and press Enter – Press Enter on the Go To choice – Page twice to get to Compass – Walk to the point*

### **Details**

#### *Startup*

Before starting data collection, the user should activate the unit, confirm settings, and acquire satellites.

#### *Navigating Waypoints*

1. **Press** the **Nav** button.
2. **Select** *Go To Point*
3. **Select** *Waypoints*
4. Use the rocker to select the desired waypoint from the list and press the **Enter** button.
5. **Select** *Go To* and press **Enter**.
6. **Press** **Page** twice to get to the compass.
7. Use the compass to walk to the designated waypoint until the distance to next cannot be reduced any lower. This distance may or may not reach 0, but should probably be around 5 feet and definitely no more than 10 feet.
8. Repeat the process to navigate to additional points.
