Background:

The editor Toolbars in the current version of Customer Service Toolkit for the Build-Your-Own Point and Resource Inventory (Points) layers now has a tool that enables a user to move a point once it's been placed on the map. This will explain how to use it.

Procedure:

1. Click on the Toolkit Digitizer (pencil) tool and start editing the Resource Inventory (Points) or build-your-own Point Layer. (The Point Editor has the same tool.)
2. Use the **Select Feature Tool** on the Toolbar to select the point you want to move.

3. Next use the black **Edit Tool** and hover over the point. When it changes to crossed arrows, hold down the left mouse key and drag the point to the desired location
