

Spokane ICCS

The National Resource Inventory (NRI) definition for **Urban land** includes residential, industrial, commercial, and institutional land; construction sites; public administrative sites; railroad yards; cemeteries; airports; golf courses; sanitary landfills; sewage treatment plants; water control structures and spillways; other land used for such purposes; small parks (less than 10 acres) within urban and built-up areas; and highways, railroads, and other transportation facilities if they are surrounded by urban areas.

Included are tracts of less than 10 acres that do not meet the above definition but are completely surrounded by Urban land.

Two size categories are recognized in the NRI: areas of 0.25 acres to 9.9 acres
 areas of 10 acres or greater

Rural transportation land includes permanent transportation facilities such as state and county roads, railroads and permanent roads to rural residences and farm and ranch headquarters. Farm lanes to and through fields are not considered to be permanent and not included in this category.

Rural transportation lands are only found outside of urban and built-up areas.
