

TECHNICAL NOTES

USDA-Natural Resources Conservation Service
Boise, Idaho

TN RANGE NO. 38

October 2007

Technical Note No. 38, Profitable Grazing-Based Dairy Systems, was originally published in May, 2007 as a National Technical Note (#1) for Range and Pasture

Well-managed grazing-based dairies help protect soil, water, air, plant and animal resources by maintaining permanent vegetative cover, increasing soil organic matter, improving nutrient distribution, and reducing the potential for odors, spills or runoff from concentrated animal housing, feed lots and waste storage facilities.

Additionally, they have healthier cows with longer productive lives and can often boost income by reducing, feed, labor, equipment and fuel costs.

This document is intended to support and encourage the start-up of grazing-based dairy farms across the Nation.

The Technical Note is available online at
http://directives.sc.egov.usda.gov/media/pdf/tn_rp_1_a.pdf.

File this in the Range section of the Technical Notes, Section VI of the Technical Guide.
