

Landowner Guide to the Natural Resources Conservation Service Wetlands Reserve Program

What is the Wetlands Reserve Program?

The Wetlands Reserve Program (WRP) is a voluntary conservation program that offers landowners the means to restore, enhance, and protect wetlands on their property through permanent easements, 30-year easements, 30-year contracts (tribal members), or cost-share agreements.

The Natural Resources Conservation Service (NRCS) is looking for sites where former wetlands have been drained, altered, or manipulated **for agricultural production**. The landowner must be interested in restoring the wetland and then protecting the site. Also of interest are lands that have had wetland restoration actions previously conducted.

Enrollment Options

Permanent Easement: A conservation easement in perpetuity. USDA pays 100 percent of the easement value and up to 100 percent of the restoration costs.

30-Year Easement: An easement that expires after 30 years. USDA pays up to 75 percent of the easement value and up to 75 percent of the restoration costs. For both permanent and 30-year easements, USDA pays all costs associated with recording the easement in the local land records office, including recording fees, charges for abstracts, survey and appraisal fees, and title insurance.

30-Year Contracts for Indian Lands: USDA pays up to 75 percent of the land value and up to 75 percent of the restoration costs.

Restoration Cost-Share Agreement: A 10-year agreement to restore or enhance wetland functions and values without placing an easement on the enrolled acres. USDA pays up to 75 percent of the restoration costs.

Reserved Rights Grazing Pilot (RRGP) Permanent and 30-year Easements and 30-year Contracts: Landowners enrolling in RRGPs are paid 25 percent less in order to maintain their right to graze their easement acres. A site-specific grazing plan will be developed to benefit wildlife habitat and wetland functions and values that follow the NRCS prescribed grazing management guidelines. The WRP RRGPs warranty easement deed will be recorded stating that, in Montana, the landowner will be assured the right to graze at least 75 percent of the available AUMs on the easement in normal years. An NRCS specialist will calculate AUMs during preliminary field visits. See your local NRCS field office for more details.

General Landowner Eligibility Criteria

- Meet the adjusted gross income limitation. Producers with adjusted nonfarm gross income, averaged over 3 years, of \$1 million or greater are not eligible unless 66.66 percent or more of their total income is average adjusted gross farm income.
- Comply with the highly erodible land and wetland conservation provisions (sodbuster/swampbuster).
- Demonstrate ownership of the land for the past 7 years or more for easement applications. Certain exceptions, such as inheritance, may apply.
- Have existing water rights adequate for the planned wetlands or be willing to apply for or transfer additional water rights.
- Hold clear title to the land or secure a signed subordination agreement from the lien holder.

General Land Eligibility Criteria

Eligibility for the WRP will be determined by a team of NRCS employees during an initial site visit. Examples of eligible land are included below:

- Wetlands cleared and/or drained for farming, pasture, or timber production.
- Meadows drained to facilitate haying or grazing.
- Drained or farmed potholes.
- Lands adjacent to restorable wetlands that contribute significantly to wetland functions and values.
- Previously restored wetlands.
- Existing or restorable riparian habitat corridors that connect protected wetlands.
- Lands substantially altered by flooding where there is a likelihood of successful wetland restoration at a reasonable cost.
- Riparian areas that link existing protected wetlands.

Easement Compensation Value

WRP conservation easement values are determined by using an Area Wide Market Analysis (AWMA) and corresponding Geographical Area Rate Caps (GARCs). This method enables NRCS to inform potential applicants of the compensation value early in the WRP process. *It is important to note that the GARCs will always be less than the fair market value of the land as determined by the AWMA.* GARCs will be less than the fair market value because the landowner still retains certain rights, including controlling access, subsurface mineral rights, recreational rights, and title. Contact your local NRCS field office for more information regarding compensation.

Frequently Asked Questions

How do I apply for a WRP easement?

You can complete a conservation program application, which can be obtained from your local field office. Prior to applying, it is recommended that you talk to your local NRCS field office to schedule an onsite visit to determine program eligibility.

Once I apply, do I have to go through with the easement? What if I change my mind?

You are not considered enrolled into the WRP until you sign the Agreement to Purchase a Conservation Easement (APCE). You may withdraw your application at any time without penalty. After you sign the APCE, you will be officially enrolled in the WRP and, if your application is withdrawn, NRCS can seek cost recovery. Before signing the APCE, you should have a firm understanding of the easement boundaries, the planned restoration activities, and the contents of the warranty easement deed.

What if my land is owned by an entity and not an individual?

Entities can enroll their property in WRP; however, these entities have to be privately owned. State and federal agencies are not eligible to participate in WRP. Entities can include a group of landowners (e.g. family members), nonprofit organizations, foundations, or church organizations.

Do I have to enroll all my land in the WRP?

No, you do not have to enroll all of your land (or parcel) in the WRP. The easement boundary will be determined by your conservation goals and how well the easement meets the goals of the WRP. The size of the easement boundary is contingent upon how many restorable acres are present. Easement size and boundary will be discussed during a preliminary visit with NRCS.

Can I prevent people from trespassing or accessing the WRP easement on my property?

Yes, you reserve the right to prevent the general public from trespassing or accessing the WRP easement on your property.

Can I lease the WRP easement for hunting or fishing?

Yes, you reserve the right to lease your land for hunting and fishing. Hunting and fishing are considered “undeveloped” recreation activities. Temporary structures, such as tree stands and duck blinds, are permitted within the WRP easement. In order to install a permanent structure for the purposes of hunting, you will need to secure permission from NRCS prior to installation. Permanent structures of this nature will be determined on a case-by-case basis and are not guaranteed.

Can I use the WRP easement for developed recreation?

While you reserve the right to lease your land for undeveloped recreation, you cannot use the easement area for developed recreation. Examples of developed recreation include, but are not limited to, camping facilities; recreational vehicle trails and tracks; sporting clay operations; skeet shooting operations; firearm range operations; and the infrastructure to raise, stock, or release captive raised waterfowl, game birds, or other wildlife for hunting or fishing.

Can I graze within the WRP easement?

Unlimited grazing within a WRP easement is not guaranteed nor should it be expected. Limited grazing is allowed only through a compatible use authorization request approved by the NRCS state conservationist.

Montana has an enrollment option (reserved rights grazing pilot) that does allow limited grazing activities with some restrictions, although not all wetlands qualify for this enrollment option. Talk to your local NRCS field office staff for more details.

Can I plant or harvest any crop on the WRP easement?

No, planting or harvesting of any crop is prohibited on all WRP easements, including the reserved rights grazing pilot enrollment option. Food plots may be planted to improve wildlife habitat through a compatible use authorization.

Can I hay or mow the WRP easement?

Haying or mowing within a WRP easement is not guaranteed nor should it be expected. It is only allowed through a compatible use authorization request approved by the NRCS state conservationist. Management activities will only be allowed in order to improve or enhance wetland quality and wildlife habitat.

Frequently Asked Questions

Can I build a house or other structure on the WRP easement?

No, building or placing structures on, under, or over the easement area is prohibited. Temporary structures for recreational use (i.e. hunting) are allowed.

Do I lose the water rights associated with the WRP easement?

You reserve the right to water uses and water rights identified as “reserved” to the landowner in the warranty easement deed. Some water rights may have to be designated for the WRP easement to ensure that the wetland continues to function following restoration. Water rights will be discussed during the planning stages of easement acquisition.

Do I still need to pay taxes on the WRP easement?

Yes, because you retain the title and *ownership* of the land that is placed in the WRP easement, you must pay scheduled taxes.

Do I have a say in what restoration actions will occur on my property?

Yes, you will work closely with NRCS throughout the WRP process. This includes participating in the design of the wetland restoration project. The restoration project must fit the goals of the WRP and the goals of the landowner. If a mutually agreed restoration plan cannot be developed, the program application will be cancelled.

After the WRP easement is closed and the wetland restoration is completed, what are my responsibilities as a landowner?

Once the planned restoration activities are completed, the landowner is responsible for maintenance of the WRP easement. This would apply to activities such as controlling noxious weeds, maintaining structures (fences, water control, etc.) and taking emergency measures to control pests as required by State and Federal laws.

How long does it typically take to secure the easement and restore the site?

Securing an easement is a long process, so you should not expect immediate compensation for your WRP easement. NRCS would like to close easements within 12 to 18 months from the application date. Restoration must be completed within 3 years of closing the WRP easement.

How do I get more information on the WRP?

More information is available on the Montana NRCS Web site at www.mt.nrcs.usda.gov/programs/wrp/. Visit your local NRCS field office for more specific information on the WRP. You can access a field office directory online at www.mt.nrcs.usda.gov/contact/offices/.
