

*INSTRUCTION SHEET
FOR MISSOURI STANDARD DRAWINGS
29-L-50A THRU 29-L-50F*

- 1. For some sites, the waterways have very small drainage areas if waterway is constructed and grass is established prior to terraces being constructed. Use Standard Drawings 29-L-50A and 29-L-50B when waterway is built without side dikes. Seeding area is entire excavated area which is normally the constructed top width.*
- 2. Use Standard Drawings 29-L-50C and 29-L-50D when waterway side dikes are used. The seeding area is the area from top of dike to top of dike. In some counties, cost share is based on seeding area from top of dike to top of dike.*
- 3. Use Standard Drawings 29-L-50E and 29-L-50F when waterway side dikes are used and the county seeding cost share is the excavated area.*
