

*INSTRUCTION SHEET
FOR MISSOURI STANDARD DRAWINGS
29-L-82A, 29-L-82B AND 29-L-83*

The following changes and instructions apply to the above listed drawings.

- a. Perforated base plate and permeable base is required on Standard Drawing 29-L-83. to prevent standing water in relief well.*
- b. Standard Drawing 29-L-82B does not require the perforated base plate and permeable base.*
- c. The projection of relief well above ground (H_A) may vary from zero (0) to 12 inches.*
- d. Perforation of relief well in that part protruding above ground should help reduce scour around relief well. This is not required, and may be omitted by crossing out the pertinent note.*
- e. There may be a few cases where trash guard or grating is not required. In most cases, they are required for safety of people and animals. They may also prevent an animal or debris from plugging relief well or underground outlet.*

The standard drawings and these instructions incorporate all the variances listed in State Conservation Engineers letter dated Feb. 6, 2001. These variances apply to Practice Standard 620 dated 8-2001.
