

*INSTRUCTION SHEET  
FOR MISSOURI STANDARD DRAWINGS  
29-N-400A*

*This drawing is intended to be used primarily on PL-566 small floodwater retarding dams, but may be used for other work if applicable. The intent was to reduce the need for showing legends and extensive labeling on each site. The minimum items to be labeled are shown on this drawing. The extent of labeling other items will be the designer's decision as long as drawings are neat, readable and present a good appearance.*
