

NOTES:

1. Construct floodway section in existing levee as shown on plans and as staked in the field.
2. Use excavated material from existing levee as fill material to construct inlet and exit slopes for floodway. Use remainder of excavated material to construct berms for inlet and exit slopes as shown on plan view drawing for floodway.
3. Additional borrow required to construct the floodway and berms shall be obtained from the borrow area as shown on the plan view drawing for this floodway.
4. For further details, see Missouri Construction Specification 657, Wetland Restoration.
5. All disturbed areas shall be seeded and mulched in accordance with the seeding and mulching specification provided with these plans.
6. See Quantity Summary sheet for estimated quantities.
