

Air Quality Enhancement Activity – AIR04 – Use drift reducing nozzles, low pressures, lower boom height, and adjuvants to reduce pesticide drift

Louisiana Criteria

If producers can demonstrate that they are adopting any of the following technologies, outlined under the Criteria section in the AIR04 description, they should be considered eligible in Louisiana:

- Drift reduction nozzles
- Boom drops
- Shielding
- Electrostatic spray systems
- Spray pressure reduction, below 45 psi, if specified by nozzle criteria
- Boom height reduction to just above plant canopy
- Spray adjuvants for evaporation reduction or increasing density
