

WOULD YOU . . .

- Like a free wildlife management plan written for your land for timber and wildlife to benefit both game and non-game species?
- Like technical and financial assistance to restore longleaf pine to your property?
- Like to have wild turkey brood or nesting cover on your land?
- Like to encourage more pollinator insects like butterflies on your land?
- Like to enhance your longleaf pine plant community as a natural food plot through the use of prescribed fire?

PHOTO BY LONGLEAF ALLIANCE

Our 9 biologists in the historical range of Longleaf Pine in the southeastern United States are currently working with the USDA Natural Resources Conservation Service (NRCS) to provide professional assistance through consultation to private landowners, including a written forestry and wildlife management plan for your property. If your land qualifies, these professionals can help you attain financial assistance in restoring your property to Longleaf Pine, and discuss with you the benefits to multiple species of wildlife and plants on your land. The USDA is an equal opportunity provider and employer.
