

WILLIAMS -- NORTH DAKOTA STATE SOIL

Williams Soil Profile

Surface layer: dark grayish brown loam
Subsoil - upper: light brownish gray loam
Subsoil - lower: light olive brown loam
Substratum: light brownish gray loam

Williams soils are among the most extensive and economically important soils in North Dakota. Most level to gently rolling areas of these soils are used as cropland. Wheat, barley, oats, flax, and sunflowers are the principal crops. Most rolling and hilly areas are used as rangeland. The native vegetation consists of western wheatgrass, blue grama, needleandthread, green needlegrass, and prairie junegrass. Natural fertility and the content of organic matter are high in these soils.

There are more than 2.2 million acres of Williams soils in North Dakota. The soil name is derived from Williams County, North Dakota. The Williams series was recognized as an official soil series in 1900. The type location was in Mountrail County, near the town of White Earth.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD). To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call 202-720-5964 (voice or TDD). *USDA is an equal opportunity provider and employer.*
