

VICTORY -- REPRESENTATIVE SOIL OF THE U.S. VIRGIN ISLANDS

Victory Soil Profile

Surface layer: brown loam

Subsoil - upper: dark yellowish brown loam

Subsoil - lower: brown very gravelly loam

Substratum: very pale brown very gravelly loam

Bedrock: weathered igneous rock

Victory soils are on the summits and side slopes of volcanic hills and mountains. They are used mainly as rangeland and pasture. Small areas have been subdivided for residential development.

Victory soils formed in material weathered from extrusive igneous bedrock of mixed origin. These soils have low or medium fertility and are slightly acid or neutral throughout the profile. They are unsuited to cultivated crops.

The word "Victory" was derived from a local estate, Mount Victory near Annaly.

U.S. Virgin Islands

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD). To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call 202-720-5964 (voice or TDD). *USDA is an equal opportunity provider and employer.*
