

Printing Soil Survey Maps

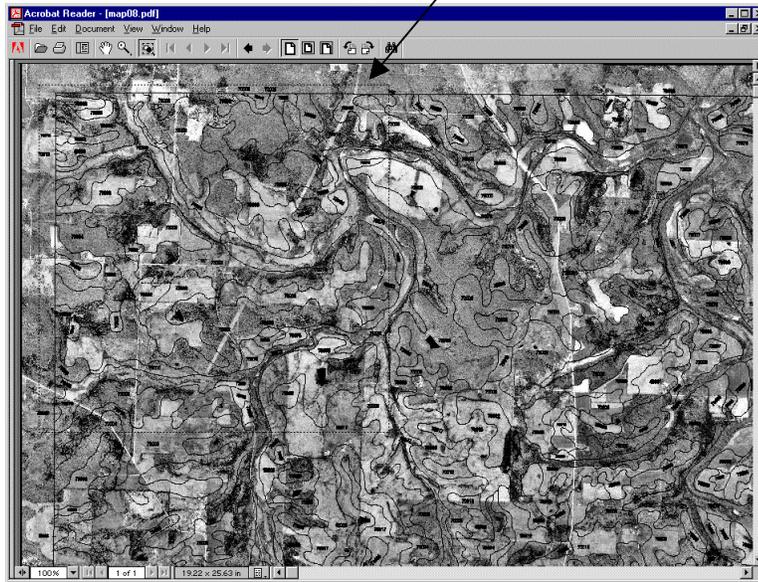

The soil survey maps were made at a scale of 1:24,000 and were designed to be used at that scale. To print the maps at that scale, set the view to Actual Size from the View pull-down menu.

Using the pan tool, go to the area you would like to print. Select the Graphic Selection Tool by holding down the Text Selection Tool button and clicking on the Graphic Selection Tool button.

Using the Graphic Selection Tool, drag a box around the area you would like to print. Note the dashed lines forming a box around the area to print.

Select File, Print. The Print Range will be set to Selected Graphic. Click OK, and the map will be sent to the printer.
