Plants for Enhancing Pollinator Habitat in Arizona

Introduction

This plant list was developed by The Xerces Society and the Natural Resources Conservation Service (NRCS), Tucson, Arizona-Plant Materials Center. This information can be applied to conservation practices such as Herbaceous Wind Barrier (603), Field Borders (386), Hedgerow Planting (422), Range Planting (550), and Tree/Shrub Establishment (612).

The list is organized by native forbs, tree and shrub species, riparian plants and non-native plants that can provide beneficial pollinator habitat. Within each growth type, the list is further organized by approximate bloom times (early, mid, late season). If you need assistance in developing a seed mix, please contact your local NRCS office.

This list is not complete and does not constitute a guarantee of reliability or quality of product. Some species in this list may be considered invasive. This list should be used as a reference tool for developing conservation alternatives. The Natural Resources Conservation Service does not endorse any supplier and no discrimination is intended by omission.
