#### **Land Uses**

| Land Use           | Modifier 1 | Modifier 2 | Modifier 3 | Modifier 4 | Modifier 5 | Modifier 6 |
|--------------------|------------|------------|------------|------------|------------|------------|
| Forest             |            |            |            |            |            |            |
| Farmstead          |            |            |            |            |            |            |
| Associated Ag Land |            |            |            |            |            |            |

### **Resource Concern Categories**

| Categories                                 |       |           |       |  |
|--|-------|-----------|-------|--|
| Category                                   | Min % | Default % | Max % |  |
| Concentrated erosion                       | 0     | 10        | 30    |  |
| Degraded plant condition                   | 0     | 20        | 30    |  |
| Field pesticide loss                       | 0     |           | 30    |  |
| Field sediment, nutrient and pathogen loss | 0     |           | 30    |  |
| Inefficient energy use                     | 0     |           | 30    |  |
| Livestock production limitation            | 0     |           | 30    |  |
| Pest pressure                              | 0     | 20        | 30    |  |
| Soil quality limitations                   | 0     | 5         | 30    |  |
| Source water depletion                     | 0     |           | 30    |  |
| Terrestrial habitat                        | 0     | 15        | 30    |  |
| Weather resilience                         | 0     | 5         | 30    |  |
| Wind and water erosion                     | 0     | 15        | 30    |  |
| Aquatic habitat                            | 0     | 5         | 30    |  |
| Fire management                            | 0     | 5         | 30    |  |

| Concentrated erosion   |       |           |       |
|--|-------|-----------|-------|
| Resouce Concern  | Min % | Default % | Max % |
| Bank erosion from streams, shorelines or water conveyance channels | 0     | 30        | 50    |

05-11-2021 Page 1 of 12

| Concentrated erosion    |       |           |       |  |  |
|-------------------------|-------|-----------|-------|--|--|
| Resouce Concern         | Min % | Default % | Max % |  |  |
| Classic gully erosion   | 0     | 40        | 50    |  |  |
| Ephemeral gully erosion | 0     | 30        | 50    |  |  |

| Degraded plant condition        |       |           |       |
|---------------------------------|-------|-----------|-------|
| Resouce Concern                 | Min % | Default % | Max % |
| Plant productivity and health   | 0     | 50        | 100   |
| Plant structure and composition | 0     | 50        | 100   |

| Field pesticide loss                    |       |           |       |
|---|-------|-----------|-------|
| Resouce Concern                         | Min % | Default % | Max % |
| Pesticides transported to groundwater   | 0     | 50        | 100   |
| Pesticides transported to surface water | 0     | 50        | 100   |

| Field sediment, nutrient and pathogen loss  |       |           |       |  |  |
|---|-------|-----------|-------|--|--|
| Resouce Concern   | Min % | Default % | Max % |  |  |
| Nutrients transported to groundwater  | 0     | 20        | 50    |  |  |
| Nutrients transported to surface water  | 0     | 20        | 50    |  |  |
| Pathogens and chemicals from manure, biosolids or compost applications transported to groundwater   | 0     | 20        | 50    |  |  |
| Pathogens and chemicals from manure, biosolids or compost applications transported to surface water | 0     | 20        | 50    |  |  |
| Sediment transported to surface water   | 0     | 20        | 50    |  |  |

| Inefficient energy use   |       |           |       |
|--|-------|-----------|-------|
| Resouce Concern  | Min % | Default % | Max % |
| Energy efficiency of equipment and facilities                        | 0     | 50        | 100   |
| Energy efficiency of farming/ranching practices and field operations | 0     | 50        | 100   |

| Livestock production limitation                               |       |           |       |
|---|-------|-----------|-------|
| Resouce Concern   | Min % | Default % | Max % |
| Feed and forage balance                                       | 0     | 50        | 50    |
| Inadequate livestock water quantity, quality and distribution | 0     | 50        | 50    |

| Pest pressure       |       |           |       |
|---------------------|-------|-----------|-------|
| Resouce Concern     | Min % | Default % | Max % |
| Plant pest pressure | 0     | 100       | 100   |

### **Practices**

| Practice  | Practice Code | Practice Type |
|---|---------------|---------------|
| Enhance a grassed waterway  | E412A         | F             |
| Leaving tall crop residue for wildlife  | E328L         | F             |
| Forage testing for improved harvesting methods and hay quality                                    | E511C         | F             |
| Crop Bundle #24 - Cropland Soil Health Management System  | B000CPL24     | F             |
| Diversify crop rotation with canola or sunflower to provide benefits to pollinators               | E328M         | F             |
| Resource conserving crop rotation   | E328A         | F             |
| Improved resource conserving crop rotation  | E328B         | F             |
| Conservation crop rotation on recently converted CRP grass/legume cover                           | E328C         | F             |
| Soil health crop rotation   | E328E         | F             |
| Modifications to improve soil health and increase soil organic matter                             | E328F         | F             |
| Crop rotation on recently converted CRP grass/legume cover for soil organic matter improvement    | E328G         | F             |
| Conservation crop rotation to reduce the concentration of salts                                   | E328H         | F             |
| Forage harvest to reduce water quality impacts by utilization of excess soil nutrients            | E328I         | F             |
| Improved crop rotation to provide benefits to pollinators   | E328J         | F             |
| No till to reduce soil erosion  | E329A         | F             |
| Silvopasture to improve wildlife habitat  | E381A         | F             |
| Installing electrical fence offsets and wire for cross-fencing to improve grazing management      | E382B         | F             |
| Biochar production from woody residue   | E384A         | F             |
| Enhanced field borders to reduce soil erosion along the edge(s) of a field                        | E386A         | F             |
| No till to reduce tillage induced particulate matter  | E329B         | F             |
| No till to increase plant-available moisture  | E329C         | F             |
| No till system to increase soil health and soil organic matter content                            | E329D         | F             |
| No till to reduce energy  | E329E         | F             |
| Controlled traffic farming to reduce compaction   | E334A         | F             |
| Strategically planned, patch burning for grazing distribution and wildlife habitat                | E338A         | F             |
| Short-interval burns to promote a healthy herbaceous plant community                              | E338B         | F             |
| Sequential patch burning  | E338C         | F             |
| Cover crop to reduce soil erosion   | E340A         | F             |
| Intensive cover cropping to increase soil health and soil organic matter content                  | E340B         | F             |
| Use of multi-species cover crops to improve soil health and increase soil organic matter          | E340C         | F             |
| Install variable frequency drive(s) on pump(s)  | E374A         | F             |
| Switch fuel source for pump motor(s)  | E374B         | F             |
| Intensive orchard/vineyard floor cover cropping to increase soil health                           | E340D         | F             |
| Use of soil health assessment to assist with development of cover crop mix to improve soil health | E340E         | F             |
| Cover crop to minimize soil compaction  | E340F         | F             |

05-11-2021 Page 4 of 12

| Practice  | Practice Code | Practice Type |
|---|---------------|---------------|
| Cover crop to reduce water quality degradation by utilizing excess soil nutrients                   | E340G         | F             |
| Cover crop to suppress excessive weed pressures and break pest cycles                               | E340H         | F             |
| Using cover crops for biological strip till   | E340I         | F             |
| Reduced tillage to reduce soil erosion  | E345A         | F             |
| Reduced tillage to reduce tillage induced particulate matter  | E345B         | F             |
| Reduced tillage to increase plant-available moisture  | E345C         | F             |
| Reduced tillage to increase soil health and soil organic matter content                             | E345D         | F             |
| Reduced tillage to reduce energy use  | E345E         | F             |
| Intermediate IWM - Year 1, Equipment with Soil or Water Level monitoring                            | E449F         | F             |
| Reduce risks of nutrient loss to surface water by utilizing precision agriculture technologies      | E590B         | F             |
| Mulching with natural materials in specialty crops for weed control                                 | E484C         | F             |
| Enhanced field borders to increase carbon storage along the edge(s) of the field                    | E386B         | F             |
| Enhanced field borders to decrease particulate emissions along the edge(s) of the field             | E386C         | F             |
| Enhanced field borders to increase food for pollinators along the edge(s) of a field                | E386D         | F             |
| Enhanced field borders to increase wildlife food and habitat along the edge(s) of a field           | E386E         | F             |
| Increase riparian herbaceous cover width for sediment and nutrient reduction                        | E390A         | F             |
| Increase riparian herbaceous cover width to enhance wildlife habitat                                | E390B         | F             |
| Increase riparian forest buffer width for sediment and nutrient reduction                           | E391A         | F             |
| Increase stream shading for stream temperature reduction  | E391B         | F             |
| Increase riparian forest buffer width to enhance wildlife habitat                                   | E391C         | F             |
| Extend existing filter strip to reduce water quality impacts  | E393A         | F             |
| Stream habitat improvement through placement of woody biomass                                       | E395A         | F             |
| Fishpond management for native aquatic and terrestrial species                                      | E399A         | F             |
| Advanced Tailwater Recovery   | E447A         | F             |
| Complete pumping plant evaluation for water savings   | E449A         | F             |
| Advanced Automated IWM - Year 2-5, soil moisture monitoring   | E449C         | F             |
| Advanced Automated IWM - Year 1, Equipment and soil moisture or water level monitoring              | E449D         | F             |
| Intermediate IWM - Years 2-5, Soil or Water Level monitoring  | E449G         | F             |
| Manage livestock access to waterbodies to reduce nutrients or pathogens to surface water            | E472A         | F             |
| Mulching to improve soil health   | E484A         | F             |
| Reduce particulate matter emissions by using orchard or vineyard generated woody materials as mulch | E484B         | F             |
| Harvest of crops (hay or small grains) using measures that allow desired species to flush or escape | E511A         | F             |
| Forage harvest management that helps maintain wildlife habitat cover, shelter or continuity         | E511B         | F             |
| Cropland conversion to grass-based agriculture to reduce soil erosion                               | E512A         | F             |
| Forage and biomass planting to reduce soil erosion or increase organic matter to build soil health  | E512B         | F             |
| Cropland conversion to grass for soil organic matter improvement                                    | E512C         | F             |

| Forage plantings that help increase organic matter in depleted soils                                 | E512D         | F             |
| Forage and biomass planting that produces feedstock for biofuels or energy production.               | E512E         | F             |
| Establishing native grass or legumes in forage base to improve the plant community                   | E512F         | F             |
| Native grasses or legumes in forage base   | E512G         | F             |
| Grazing management that improves monarch butterfly habitat   | E528B         | F             |
| Stockpiling cool season forage to improve structure and composition or plant productivity and health | E528F         | F             |
| Forage plantings that enhance bird habitat cover and shelter or structure and composition            | E512H         | F             |
| Establish pollinator and/or beneficial insect and/or monarch habitat                                 | E512I         | F             |
| Establish wildlife corridors to provide habitat continuity or access to water                        | E512J         | F             |
| Maintaining quantity and quality of forage for animal health and productivity                        | E528A         | F             |
| Incorporating wildlife refuge areas in contingency plans for wildlife.                               | E528C         | F             |
| Grazing management for improving quantity and quality of food or cover and shelter for wildlife      | E528D         | F             |
| Improved grazing management on pasture for plant productivity and health with monitoring activities  | E528G         | F             |
| Prescribed grazing to improve/maintain riparian and watershed function-elevated water temperature    | E528H         | F             |
| Grazing management that protects sensitive areas -surface or ground water from nutrients             | E528I         | F             |
| Prescribed grazing on pastureland that improves riparian and watershed function                      | E528J         | F             |
| Improved grazing management for soil compaction on pasture through monitoring activities             | E528K         | F             |
| Prescribed grazing that improves or maintains riparian and watershed function-erosion                | E528L         | F             |
| Grazing management that protects sensitive areas from gully erosion                                  | E528M         | F             |
| Enhanced rain garden for wildlife  | E570A         | F             |
| Stream crossing elimination  | E578A         | F             |
| Stream corridor bank stability improvement   | E580A         | F             |
| Stream corridor bank vegetation improvement  | E580B         | F             |
| Clipping mature forages to set back vegetative growth for improved forage quality                    | E528O         | F             |
| Implementing Bale or Swath Grazing to increase organic matter and reduce nutrients in surface water  | E528P         | F             |
| Use of body condition scoring for livestock on a monthly basis to keep track of herd health          | E528Q         | F             |
| Advanced Pumping Plant Automation  | E533A         | F             |
| Complete pumping plant evaluation for energy savings   | E533B         | F             |
| Improving nutrient uptake efficiency and reducing risk of nutrient losses                            | E590A         | F             |
| Improving nutrient uptake efficiency and reducing risk of nutrient losses on pasture                 | E590C         | F             |
| Reduce risk of pesticides in surface water by utilizing precision pesticide application techniques   | E595A         | F             |
| Reduce risk of pesticides in water and air by utilizing IPM PAMS techniques                          | E595B         | F             |
| Existing Activity Payment-Land Use   | E300EAP1      | F             |
| Existing Activity Payment-Resource Concern   | E300EAP2      | F             |
| Increase the size requirement of refuges planted to slow pest resistance to Bt crops                 | E595D         | F             |

| Factors            | Algorithm | Allowable Min | Default | Allowable Max |
|--------------------|-----------|---------------|---------|---------------|
| Program Priorities | Default   | 15            | 20      | 35            |
| Efficiencies       | Default   | 10            | 10      | 10            |

## **Display Group: FY 21 NIPF - Classic (Active)**

An asterisk will be displayed to show that it is a conditional section or conditional question.

## **Survey: Applicability Questions**

| Section: Applicability             |                |        |  |
|------------------------------------|----------------|--------|--|
| Question                           | Answer Choices | Points |  |
| Is this a CSP Classic Application? | YES            |        |  |
| is this a CSF Classic Application? | NO             |        |  |

### **Survey: Category Questions**

| Section: Category  |                                |        |  |
|--|--------------------------------|--------|--|
| Question   | Answer Choices                 | Points |  |
| Is the majority of the land in the assessment in Connecticut | Majority of operation is in CT |        |  |
| Is the majority of the land in the assessment in Connecticut | Otherwise                      |        |  |

## **Survey: Program Questions**

| Section: Program Questions                                 |   |        |
|--|---|--------|
| Question   | Answer Choices  | Points |
| Select One At the time of application, the applicant meets | 8 State Priority Resource Concern<br>Categories on all land uses in the operation     | 95     |
|  | 6 - 7 State Priority Resource Concern<br>Categories on all land uses in the operation | 75     |
|  | 4 - 5 State Priority Resource Concern<br>Categories on all land uses in the operation | 50     |
|  | 2 - 3 State Priority Resource Concern<br>Categories on all land uses in the operation | 25     |
|  | Otherwise   | 0      |

| Section: Program Questions  |  |        |
|---|--|--------|
| Question  | Answer Choices   | Points |
| Select One By the end of the contract, the applicant will implement additional conservation activities across the operation that allows the producer to | Exceed the stewardship threshold for more than 3 additional resource concern categories on at least two land uses. | 100    |
|   | Exceed the stewardship threshold for 2 - 3 additional resource concern categories on at least two land uses.       | 80     |
|   | Exceed the stewardship threshold for one additional resource concern category on at least two land uses.           | 70     |
|   | Exceed the stewardship threshold for more than 3 additional resource concern categories on one land use.           | 60     |
|   | Exceed the stewardship threshold for 2 - 3 additional resource concern categories on one land use.                 | 50     |
|   | Meet the stewardship threshold for 2 - 3 additional resource concern categories on at least two land uses.         | 40     |
|   | Meet the stewardship threshold for one additional resource concern category on at least two land uses.             | 30     |
|   | Meet the stewardship threshold for 2 - 3 additional resource concern categories on only one land use.              | 20     |
|   | otherwise  | 0      |
| s the applicant a covered producer participating in the CRP-TIP and   | YES  | 5      |
| NRCS is evaluating the assessment during the two-year period covered by the CRP-1R?   | NO   |        |

## **Survey: Resource Questions**

| Section: Resources Questions-cropland   |  |        |  |
|---|--|--------|--|
| Question Answer Choices   |  | Points |  |
| Select One A Forest Stand Improvement (666) conservation activity will be implemented | 75 - 100% of applicable forested acres   | 100    |  |
|   | 50 - 74.9% of applicable forested acres  | 75     |  |
|   | 25 - 49.9% of applicable forested acres  | 50     |  |
|   | otherwise  | 0      |  |
| Wildlife activities will be implemented to benefit:                                   | Identified species which are threatened, endangered or species of concern according to CT NDDB | 100    |  |
|   | Participant identified species which are not on CT NDDB  | 50     |  |
|   | otherwise  | 0      |  |
