Public safety through real-time structure monitoring

24/7 Asset Management / Environmental Conditions Monitoring [SaaS]

DamWatch® is a (SaaS) application that proactively monitors dams, levees, and other hydrologic infrastructure to protect against hazardous, costly, and potentially catastrophic events.

Accessible 24/7, DamWatch® accesses, processes, and centralizes all database and geospatial information in real-time and makes it available to authorized users through a secure, user-friendly interface.

DamWatch® alerts authorized personnel via any electronic medium to critical events in order to make more informed decisions and ensure resources are allocated in a timely manner.

- **Generates alerts for potentially destructive environmental events**

- **Implements, customizes, and manages all client forms**

- **Offers document management, sharing, and tracking in real-time**

- **Accesses, digitizes, and securely stores files and data (plans, photos, reports, inspections, EAPs, project files, etc.)**

- **Emergency preparedness, simulation, and exercise tool**
