

CONSERVATION ENHANCEMENT ACTIVITY

E612C

Establishing tree/shrub species to restore native plant communities

Conservation Practice 612: Tree/Shrub Establishment

APPLICABLE LAND USE: Forest; Range; Associated Ag Land

RESOURCE CONCERN: Plants

ENHANCEMENT LIFE SPAN: 15 YEARS

Enhancement Description:

Establish trees and/or shrubs to restore elements of plant diversity that have been lost through past diseases or improper management. For example, disease-resistant varieties of elm and chestnut can be established to restore the ecological functions of American elm and American chestnut. At the stand level, past forest management may have eliminated certain native tree species. Restoring stand-level diversity and function addresses a wide array of resource concerns and strengthens ongoing management activities. This enhancement improves a forest that is already in good condition by increasing plant diversity, and improving health and vigor through adding plants with resistance to disease, pests, or other local hazards. Additional benefits include contributing to carbon storage, and providing diversity in wildlife habitat and food sources.

Criteria:

States will apply general criteria from the NRCS National Conservation Practice Standard (CPS) Tree/Shrub Establishment (Code 612) as listed below, and additional criteria as required by the NRCS State Office.

- Trees/shrubs selected for planting will be adapted to site conditions and suited for the
 restoration of stands where past impacts of disease and/or pests has reduced species
 diversity.
- No trees on the Federal or state noxious weeds list, or trees known to be aggressive and/or potentially invasive in the local area, shall be planted.

| E612C - ESTABLISHING TREE/SHRUB SPECIES TO | August 2019 | Page 1 |
|--|-------------|-----------------|
| RESTORE NATIVE PLANT COMMUNITIES | o o | <u> </u> |

 A minimum of three different species of trees and/or shrubs should be planted. An exception is in situations where a lost species is being restored to a fully-stocked forest stand (i.e., American elm, American chestnut).

CONSERVATION STEWARDSHIP PROGRAM

- Trees/shrubs selected must be of good quality. Only viable, high-quality and adapted planting stock or seed will be used.
- Proper planting dates and care in handling and planting the trees/shrubs will ensure an
 acceptable rate of survival.
- Selection of planting technique and timing will be appropriate for the site and soil conditions.
- Planting density will be adequate to accomplish the long-term goal for the property.
- Survival surveys must be conducted to determine if targeted goals are met.
- A precondition for tree/shrub establishment is appropriately prepared sites. Refer to criteria in NRCS CPS Tree/Shrub Site Preparation (Code 490).
- Refer to criteria in NRCS CPS Integrated Pest Management (Code 595) to assist with site-specific strategies for pest prevention, pest avoidance, pest monitoring, and pest suppression. Protect plantings from competition from invasive plants and other environmental stressors.
- Each site will be evaluated to determine if mulching, supplemental water or other treatments (e.g., tree protection devices, shade cards, weed mats) will be needed to assure adequate survival and growth.
- The enhancement will comply with all applicable federal, state, and local laws and regulations, and with States' Forestry Best Management Practices for Water Quality.

SOUTH DAKOTA (SD) SUPPLEMENT TO CONSERVATION ENHANCEMENT ACTIVITY

E612C

Establishing tree/shrub species to restore native plant communities

Additional Criteria for SD:

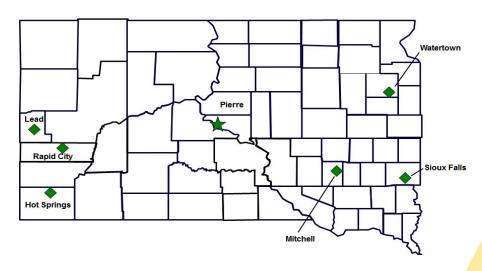

In addition to the criteria specified in the national job sheet E612C the following additional cr<mark>iteria apply in SD:</mark>

- Preference (during species selection) should be given to woody species from the Woodland
 Tech Note 37, with a rating of Y for "Wildlife Cover" and/or a rating of Y for "Wildlife Food"
 (as applicable on site according to the Conservation Tree/Shrub Group (CTSG) designation).
 - NOTE: Woodland Tech Note 37 can be found in Section I of the eFOTG under <u>All</u> Technical Notes/j. Woodland.
 - CTSG information can be found in Section II of the eFOTG under <u>Statewide Soil and Site</u> <u>Information/4. Windbreak Interpretations</u>.
- When planning Tree/Shrub Establishment it is recommended that a forester from the SD Department of Agriculture (SDDA) be consulted, to discuss with a producer the future marketability of products etc. A forester with the SDDA can be found at:
