

Conservation Implementation Strategy

South Dakota Conservation Implementation Strategy (SD CIS) Template

This template is meant to serve as an outline of the project proposal. It is recommended that you use each item below as a section heading. This will create consistency for our reviewers. You may add appendixes as necessary to provide any additional information that you feel is necessary. All maps should be included in Appendix A and labeled so that they can be referenced in the project proposal. The appendix can also include any letters of support from partners.

The SD CIS is meant to be used with the Environmental Quality Incentives Program (EQIP) and the Agricultural Conservation Easement Program (ACEP). You can include both ACEP Agricultural Land Easements (ALE) and Wetland Reserve Easements (WRE) in your proposal. Your budget should reflect the needed allocation for EQIP, ALE, and WRE separately so that funding for the project can be provided appropriately. If you have any questions about these programs, please contact the Programs staff at the State Office in Huron, SD.

Most proposals should be a minimum of 3 years in length and should not exceed 5 years in length. At the end of the project timeline, an extension of up to 2 years can be requested if valid reasons for not meeting the timeline exists. The approval of an extension is solely the discretion of the SD NRCS Leadership Team (LT). A majority of the SD NRCS LT must approve the extension.

Template Outline:

Cover Page: This page should include the name of the individual or partner submitting the proposal as well as the name of the project. Also include the mailing address, e-mail address, and phone number of the primary contact for the proposal.

- I. Problem Statement:** This section should serve as an executive summary of the project. A brief explanation of the resource issue that the proposal looks to address as well as a brief statement of how that issue will be resolved. This summary is not meant to give a lot of detail, but rather a few statements of how this issue developed and the natural resource issues to be addressed.
- II. Background:** This section should give some specifics about the history of the region and the resource concerns in the area. This can be a broad perspective of how the issue came to be over time or a description of the specific event that lead to the resource concern. Include any data collected that supports the existence of the resource concern.
- III. Resource Concerns:** List the major resource concerns to be addressed. Please be as specific as possible. This list should align with the information provided in Section II- Background and should be supported by any documentation or data provided in that section. The information provided in this section should validate the need for the core practices listed in Section VIII- Environmental Impacts.
- IV. Strategic Goals and Objectives:** Assuming this project is a portion of an overall larger effort, explain how this project fits within the larger overall effort. Describe why this area is being targeted and how it fits into the larger strategy. Briefly describe the larger effort and the goals of that effort.
- V. Desired Conditions:** Describe the final state after this project is complete. Please be as specific as you can. Explain how implementing this project plan will address the resource concerns listed and

Conservation Implementation Strategy

what the condition of those resources will be at the end of the project. This will be used as a starting point for the success story after this project is complete.

VI. Description of Geographic Region: Describe why this certain area is being targeted. What data was used to determine how this area is contributing to the resource concern. Include a map in Appendix A showing the target area(s).

- a. Overall Project Area
- b. Priority Treatment Areas within the Project Area

VII. Alternatives: Develop alternatives and describe what happens if no action is taken. Are there National Environmental Protection Act (NEPA) considerations? Also, state if partners need NEPA to be completed before funding.

- a. No Action
- b. Alternative 1
- c. Alternative 2

VIII. Environmental Impacts: Include any research or statistics that support the use of the conservation practices listed below. When listing practices, be sure to distinguish between core practices and supporting practices. Also address any requirements for multiple practices that must be implemented to address a resource concern (i.e., Conservation Tillage and Conservation Crop Rotation must be implemented together to address soil health).

- a. Core Conservation Practice List
- b. Supporting Conservation Practice List
- c. Any requirements for the implementation of multiple practices

IX. Outreach Plan: Describe any outreach efforts that will be used and how those efforts will reach the intended audience. Include specific numbers of events to be held, articles written, etc., and the number of people to be reached.

X. Partnerships and Supporting Efforts: List any supporting partners and how they will contribute. Any partner programs that will be used in conjunction with this project can be included here as well. If a partner is providing a letter of support, please attach it in the appendix. Please include any partner contributions whether direct or indirectly supporting this project in Section XIV - Budget.

XI. Prioritizing Assistance: Please develop any needed screening or ranking questions. If you have questions about the validity of a screening or ranking question, please feel free to reach out to the Programs staff for assistance.

- a. Screening Questions
- b. Ranking Questions

XII. Implementation Timeline and Goals: Specify the timeline of the project, beginning and end dates. Remember that most project should be a minimum of 3 years and a maximum of 5. The timeline should line up with your monitoring plan and goals to ensure results are achievable. All of this should allow a success story to be developed in a timely manner. Actual costs should be placed in the budget.

- a. Acres treated by year

Conservation Implementation Strategy

b. Estimated quantity of each core practice needed to address the resource concern

XIII. Measuring and Monitoring Results: Describe how progress will be tracked to ensure the goals and objectives are being met. This should include practice implementation and budget performance. Also include how monitoring improvements in the resource will be tracked and reported. Explain how we will know when the goals are met, and the resource concern is alleviated. These results and any supporting data will also be used in any success stories.

XIV. Budget: This section should include specific details on the amount of funding being requested from NRCS by program (EQIP, ALE, WRE, CStP) by year. The budget should also include specific details on any partner funds that will be used to support this project proposal. If a partner is providing funding, those funds should be shown in the budget. For example, Partner Name - \$5000. As well as a description of how those funds will be used to support the project and address the resource concerns. Partner contributions can be in-kind or cash. Partner funds can be for technical or financial assistance.

XV. Appendix – Attach any additional information as appropriate such as maps and letters of support.
