Incentive Contracts

???

Stepping Stone EQIP → CSP

Expand resource benefits via incentive practices such as cover crops, transition to resource conserving crop rotations and precision agriculture technologies along with a similarly broad suite of incentive practices for ranchers.

Every region within a State will have identified high-priority areas and each of these areas will target up to three priority resource concerns by land use. In addition to the payment for practice implementation, incentive contracts offer annual payments to address operations and maintenance costs as well as foregone income.
