

**KANSAS SUPPLEMENT TO  
CONSERVATION ENHANCEMENT ACTIVITY  
E340I**

**CONSERVATION  
STEWARDSHIP  
PROGRAM**

**Using cover crops for biological strip till**

**Additional Criteria for Kansas**

In addition to the criteria specified in the National Enhancement E340I, the following additional criteria apply in Kansas:

- Plant species, seedbed preparation, seeding rates, seeding dates, seeding depths, fertility requirements, and planting methods will be consistent with applicable local criteria and soil/site conditions. Refer to Table 1 of Form [KS-ECS-6](#), Cover Crop Design. All cover crops will have an excellent or very good rating to minimize/reduce soil compaction. Preference should be given to plants that have an excellent rating for surface compaction.

**Additional Documentation Requirements for Kansas**

In addition to the documentation requirements specified in the National Enhancement E340I, the following additional documentation requirement applies in Kansas:

- Use Form [KS-ECS-6](#), Cover Crop Design, to document the seeding.
