

**KANSAS SUPPLEMENT TO
CONSERVATION ENHANCEMENT ACTIVITY
E528H**

**CONSERVATION
STEWARDSHIP
PROGRAM**

Prescribed grazing to improve/maintain riparian and watershed function—elevated water temperature

Additional Criteria for Kansas

In addition to the criteria specified in National Enhancement E528H, the following apply in Kansas:

- Utilize Kansas Conservation Practice Standard 528, Prescribed Grazing, Construction Specifications, for grazing plan guidance, requirements, and allowable degree of use (utilization).
- Limit the use of substitute feed to the dormant season of the desired forage. A substitute feed is one that is delivered to the field and replaces the majority of daily dry matter requirements of the grazing animal. The forage-animal balance developed for the growing season will be based solely on forage grown and available within the field(s) in the grazing plan.
- Place supplement and substitute feed at least 100 feet from surface water and identified sensitive areas.

Additional Documentation Requirements for Kansas

In addition to the documentation requirements specified in National Enhancement E528H, the following apply in Kansas:

- Use Form KS-ECS-414, Proper Grazing Use, for documenting utilization.
- Prior to implementation, develop a map delineating the location of the riparian, wetland, or floodplain area to be protected and a written description of adjustments in the grazing plan to address the elevated water temperature.
