

**KANSAS SUPPLEMENT TO
CONSERVATION ENHANCEMENT ACTIVITY
E528I**

**CONSERVATION
STEWARDSHIP
PROGRAM**

**Grazing management that protects sensitive areas—surface
or ground water—from nutrients**

Additional Criteria for Kansas

In addition to the criteria specified in National Enhancement E528I, the following apply in Kansas:

- Utilize [Kansas Conservation Practice Standard 528](#), Prescribed Grazing, Construction Specifications, for grazing plan guidance, requirements, and allowable degree of use (utilization).
- Limit the use of substitute feed to the dormant season of the desired forage. A substitute feed is one that is delivered to the field and replaces the majority of daily dry matter requirements of the grazing animal. The forage-animal balance developed for the growing season will be based solely on forage grown and available within the field(s) in the grazing plan.
- Place supplemental and substitute feed at least 100 feet from surface water and identified sensitive areas.
- Nutrients will not be applied to Range land use, and thus do not need a nutrient management plan or soil tests.
- Utilize Kansas State University nutrient application recommendations when nutrients are applied to Pasture.

Additional Documentation Requirements for Kansas

In addition to the documentation requirements specified in National Enhancement E528I, the following applies in Kansas:

- Use Form [KS-ECS-414](#), Proper Grazing Use, for documenting utilization.
