

**KANSAS SUPPLEMENT TO
CONSERVATION ENHANCEMENT ACTIVITY
E528J**

**CONSERVATION
STEWARDSHIP
PROGRAM**

**Prescribed grazing on pastureland that improves riparian
and watershed function**

Additional Criteria for Kansas

In addition to the criteria specified in National Enhancement E528J, the following apply in Kansas:

- Utilize Kansas Conservation Practice Standard 528, Prescribed Grazing, Construction Specifications, for grazing plan guidance, requirements, and allowable degree of use (utilization).
- Limit the use of substitute feed to the dormant season of the desired forage. A substitute feed is one that is delivered to the field and replaces the majority of daily dry matter requirements of the grazing animal. The forage-animal balance developed for the growing season will be based solely on forage grown and available within the field(s) in the grazing plan.
- Place supplement and substitute feed at least 100 feet from surface water and identified sensitive areas.
- Utilize Kansas State University nutrient application recommendations when nutrients are applied to pasture.

Additional Documentation Requirements for Kansas

In addition to the documentation requirements specified in National Enhancement E528J, the following applies in Kansas:

- Use Form KS-ECS-414, Proper Grazing Use, for documenting utilization.
