

**KANSAS SUPPLEMENT TO
CONSERVATION ENHANCEMENT ACTIVITY
E528L**

**CONSERVATION
STEWARDSHIP
PROGRAM**

Prescribed grazing that improves or maintains riparian and watershed function–erosion

Additional Criteria for Kansas

In addition to the criteria specified in National Enhancement E528L, the following apply in Kansas:

- Utilize Kansas Conservation Practice Standard 528, Prescribed Grazing, Construction Specifications, for grazing plan guidance, requirements, and allowable degree of use (utilization).
- Limit the use of substitute feed to the dormant season of the desired forage. A substitute feed is one that is delivered to the field and replaces the majority of daily dry matter requirements of the grazing animal. The forage-animal balance developed for the growing season will be based solely on forage grown and available within the field(s) in the grazing plan.
- Place supplemental and substitute feed at least 100 feet from surface water and identified sensitive areas.

Additional Documentation Requirements for Kansas

In addition to the documentation requirements specified in National Enhancement E528L, the following apply in Kansas:

- Use Form KS-ECS-414, Proper Grazing Use, for documenting utilization.
- Include a map in the monitoring plan delineating the location of the riparian area or watershed drainage locations that are improved or maintained by this management.
- Provide a photo of the erosion feature(s) being addressed in the monitoring plan.
