

# CONSERVATION STEWARDSHIP PROGRAM

## KANSAS SUPPLEMENT TO CONSERVATION ENHANCEMENT ACTIVITY E528M

### Grazing management that protects sensitive areas from gully erosion

#### Additional Criteria for Kansas

In addition to the criteria specified in National Enhancement E528M, the following apply in Kansas:

- Utilize Kansas Conservation Practice Standard 528, Prescribed Grazing, Construction Specifications, for grazing plan guidance, requirements, and allowable degree of use (utilization).
- Limit the use of substitute feed to the dormant season of the desired forage. A substitute feed is one that is delivered to the field and replaces the majority of daily dry matter requirements of the grazing animal. The forage-animal balance developed for the growing season will be based solely on forage grown and available within the field(s) in the grazing plan.
- Place supplemental and substitute feed at least 100 feet from surface water and identified sensitive areas.

#### Additional Documentation Requirements for Kansas

In addition to the documentation requirements specified in National Enhancement E528M, the following apply in Kansas:

- Use Form KS-ECS-414, Proper Grazing Use, for documenting utilization.
- Include a map in the monitoring plan delineating the location of the sensitive area to be protected.
- Provide a photo of the erosion feature(s) being addressed in the monitoring plan.
