E645A (with Montana Supplement)**

**CONSERVATION
STEWARDSHIP
PROGRAM**

Reduction of attractants to human-subsidized predators in sensitive wildlife species habitat

Conservation Practice 645: Upland Wildlife Habitat Management

APPLICABLE LAND USE: Crop (Annual & Mixed); Crop (Perennial); Pasture; Range; Forest; Associated Ag Land; Farmstead

RESOURCE CONCERN: Animals

PRACTICE LIFE SPAN: 1 Year

Enhancement Description

Reduction of artificial perching sites, nest sites, food, and water available to subsidized predators in areas where human-subsidized predators are a threat to sensitive wildlife species. Human-subsidized predators may include ravens, crows, magpies, coyotes, foxes, skunks, raccoons, and other species. Activities under this enhancement may include removal of non-native or invasive trees; removal of unused power poles, corrals, windmills, buildings, and other vertical structures; and/or removal or management of watering facilities, dead livestock, roadkill, garbage, animal feed, dumps, and other non-natural food sources.

Criteria

- Identify the targeted sensitive wildlife species.
- Identify the subsidized predator(s).
- Coordinate planned activities with a NRCS or partner biologist.
 - Coordination with US Fish and Wildlife Service and the State Wildlife Agency may be required.

CONSERVATION ENHANCEMENT ACTIVITY E645A (with Montana Supplement)

CONSERVATION STEWARDSHIP PROGRAM

- Treat only artificial, human caused attractants.
 - This activity shall not be used to remove or modify natural water sources, natural perching and nesting sites, or natural food sources for native predators.
- Develop an assessment of the predator attractants, including:
 - Each individual subsidy with a point on a map,
 - A description of the subsidy,
 - Effects to non-target wildlife species, especially raptors and other native predators, and
 - Potential effects to all sensitive as well as threatened and endangered (T&E) species.
- Conduct attractant removal activities in a manner to avoid direct mortality and outside of the nesting season.
- Lethal control shall not be performed as a component of this activity.

MT:

- **In Montana, the targeted sensitive wildlife species is the greater sage-grouse. This enhancement is for the reduction of artificial, human caused perching sites, nest sites, food, and water available to subsidized predators that pose a threat to sage-grouse. Human-subsidized predators may include ravens, coyotes, foxes, skunks, and other species. Activities under this enhancement may include removal of non-native or invasive trees; removal of unused power poles, corrals, windmills, buildings, and other vertical structures; and/or removal or management of watering facilities, dead livestock, roadkill, garbage, animal feed, dumps, and other non-natural food sources.**

CONSERVATION ENHANCEMENT ACTIVITY E645A (with Montana Supplement)

CONSERVATION STEWARDSHIP PROGRAM

- Activities under this enhancement can include removal of invasive conifers that have expanded into sagebrush communities in ecological sites where they should not be present and are negatively impacting sage-grouse habitat. This enhancement is not for treatment/removal of sagebrush vegetation.
- This enhancement will be implemented in accordance with the Conservation Measures in the U.S. Fish and Wildlife Service Conference Report for the NRCS Sage Grouse Initiative (SGI). Conservation measures must be identified in the 645 Plan and followed when implementing this enhancement.
- The cultural resource review process will be completed prior to removing any structure or disturbing the ground.
- This enhancement is not intended for the removal of any hazardous waste materials. This would include, but is not limited to, tires, batteries, insulation, and pesticide/herbicide containers.

Documentation and Implementation Requirements

Participant will:

- Prior to implementation, meet with NRCS to review results of predator attractant assessment conducted by NRCS and to discuss predator attractants to be removed.
- During implementation, maintain a field log to include:
 - Map of the assessed and removed predator attractants with point locations and descriptions of each item.
 - Dates when the attractant was removed.
 - Before and after photographs of each removed attractant.
- After implementation, provide the field log to NRCS for review to verify enhancement was implemented to meet criteria.
