

**CONSERVATION ENHANCEMENT ACTIVITY**

**E528I**

**CONSERVATION STEWARDSHIP PROGRAM**

**Grazing management that protects sensitive areas-surface or ground water from nutrients**

**Conservation Practice 528: Prescribed Grazing**

**APPLICABLE LAND USE: Pasture, Range**

**RESOURCE CONCERN: Water**

**ENHANCEMENT LIFE SPAN: 1 year**

**Enhancement Description**

Grazing management employed will provide cover and density needed in the watershed in order to protect sensitive areas such as sinkholes, streams, highly erodible areas, or locations with plants that cannot tolerate defoliation.

**Criteria**

- A written plan for matching the forage quantity and quality produced with the grazing and/or browsing demand by livestock and wildlife will be followed.
- Enhance diversity of plants to optimize delivery of nutrients to the animals by incorporating the intensity, frequency, timing and duration of grazing and/or browsing needed as determined by a planning process that includes: 1) Clear objectives, 2) A resource inventory including a forage inventory, structural improvements, and existing resource conditions, 3) Grazing plan, and 4) A contingency plan.
- Supplemental feed and/or minerals will be balanced with the forage consumption to meet the desired nutritional level for the kind and class of grazing and/or browsing livestock.

## CONSERVATION STEWARDSHIP PROGRAM

- Minimize concentrated livestock areas to enhance nutrient distribution and improve or maintain ground cover.
- Plan the intensity, frequency, timing and duration of grazing and/or browsing that will:
  - Minimize deposition or flow of animal wastes into water bodies or sinkholes,
  - Minimize animal impacts on stream bank or shoreline stability,
  - Provide adequate ground cover and plant density to maintain or improve infiltration capacity and reduce runoff, and
  - Provide adequate ground cover and plant density to maintain or improve filtering capacity of the vegetation.
- Livestock feeding and watering facilities will be located and designed/installed in a manner to improve livestock distribution and avoid overland flow to sensitive areas.
- When nutrients are applied on pastureland, soil testing and nutrient application will be done according to local land grant university guidance or the equivalent there of.

# CONSERVATION STEWARDSHIP PROGRAM

## Documentation and Implementation Requirements

### Participant will:

- Prior to implementation, obtain a written grazing plan that identifies the following:
  - The goals and objectives of the plan
  - Forage/Animal Balance
  - A grazing plan narrative describing the basis for when livestock movement or rotation will occur.
  - Contingency plans for forage shortfalls.
  - Monitoring locations, key species, and monitoring techniques.
  - A map identifying all permanent pastures, water sources, and any riparian area or other sensitive areas improved or maintained by this management.
- Prior to implementation, a nutrient management plan will be developed if nutrients will be applied. The nutrient management plan will detail appropriate soil testing protocol and acceptable nutrient application amounts.
- Prior to implementation, a copy of the completed grazing plan will be submitted to NRCS for review and approval.
- During implementation, consult with NRCS or a qualified grazing professional to adjust and adapt the grazing plan to current conditions. Changes to the grazing plan will be documented in writing.
- After implementation, make all records available for review by NRCS to verify implementation of the enhancement.

### NRCS will:

- Prior to implementation, assist the participant with development of a grazing plan and/or nutrient management plan, as requested.
- Prior to implementation, review the plan(s) if not developed by NRCS.
- Prior to implementation, review soil test analysis

# CONSERVATION STEWARDSHIP PROGRAM

- During implementation, as requested, assist the participant with adapting the grazing strategy and plan to current conditions.
- After implementation, review written grazing records provided by the participant to determine if the grazing plan was adequately followed to protect or enhance riparian areas, wetland areas, or other sensitive areas.
- After implementation, review the nutrient management plan and application record to ensure nutrients were applied according to the plan.

**NRCS Documentation Review:**

I have reviewed all required participant documentation and have determined the participant has implemented the enhancement and met all criteria and requirements.

**Additional Information and Documentation Requirements for Oregon**

- In addition to the documentation requirements specified in the National job sheet E528I the following additional documentation requirements apply in Oregon.
  - A written grazing management plan developed by NRCS or a qualified professional (See lists below) that follows the Prescribed Grazing (528) Conservation Practice Standard, and includes specifications and implementation requirements.
  - Current NRCS employees do not qualify as “non-affiliated consultants” regardless of their experience or education.
  - For riparian grazing management strategies, a written narrative describing planned season of livestock grazing use to limit nutrients and or pathogen in surface water.
  - Specifications for this practice shall be prepared for each site based on a site by site evaluation.
  - When livestock exclusion is being implemented complete specification and implementation requirements for Fence (382) Conservation Practice Standard.
