

### **CONSERVATION ENHANCEMENT ACTIVITY**

# CONSERVATION STEWARDSHIP PROGRAM

# **E340E**

# Use of soil health assessment to assist with development of cover crop mix to improve soil health

**Conservation Practice 340: Cover Crop** 

APPLICABLE LAND USE: Crop (Annual & Mixed), Crop (Perennial), Pasture

**RESOURCE CONCERN: Soil** 

**ENHANCEMENT LIFE SPAN: 1 Year** 

#### **Enhancement Description**

Soil health assessment (year 1) to evaluate current crop rotation in addressing soil organic matter depletion. Results are utilized to select a multi-species cover crop mix to add to the current crop rotation. Follow up assessment completed (year 3).

#### <u>Criteria</u>

- Plant species, seedbed preparation, seeding rates, seeding dates, seeding depths, fertility requirements, and planting methods will be consistent with applicable local criteria and soil/site conditions (REFER TO STATE SPECIFIC LISTS).
- Determine the method and timing of termination to meet the grower's objective and the current NRCS Cover Crop Termination Guidelines.
- Select species that are compatible with other components of the cropping system.
- Ensure herbicides used with crops are compatible with cover crop selections.

| E340E - Use of soil health assessment to  | September 2023 | Page   1 |
|---|----------------|----------|
| assist with development of cover crop mix |                |          |
| to improve soil health                    |                |          |

#### **United States Department of Agriculture**

 Cover crops may be established between successive production crops, or companionplanted or relay-planted into production crops.
 Select species and planting dates that will not compete with the production crop yield or harvest.

- Do not burn cover crop residue. Do not harvest the cover crop.
- If the specific rhizobium bacteria for the selected legume are not present in the soil, treat
  the seed with the appropriate inoculum at the time of planting.
- Cover crop must provide soil coverage during all non-crop production periods to the maximum extent possible considering the cropping system, climate, and soils in the annual crop rotation. (STATES SHALL PREPARE GUIDANCE FOR THEIR LOCAL CLIMATES AND CROPPING SYSTEMS)
- Soil health assessment will be used to evaluate impact of current conservation crop rotation in addressing soil organic matter depletion, as well as additional soil health objectives of the individual grower (primary assessment made in Year 1). During Year 3, a follow up assessment will be completed to allow time for the addition of a cover crop and other management activities to have an impact on soil health. No specific soil health assessment type is required or recommended by NRCS, but at a minimum the assessment must account for soil organic matter. The specific assessment selected should provide the grower information based on their soil health objectives.
- Minimum 4 species cover crop mix will be selected based on producing higher volumes of organic material and root mass to maintain or increase soil organic matter. The cover crop mix must be compatible with the local soil, climate, and cropping systems.
- Planned crop rotation including cover crops, biomass produced, and associated
  management activities must achieve a management soil conditioning index (SCI) of zero
  or higher and results in a positive trend in the Organic Matter (OM) sub factor value over
  the life of the rotation.

#### Additional criteria when livestock are included in the system:

Cover Crops may only be grazed in a manner that retains or enhances the purpose of increasing soil organic matter.

| E340E - Use of soil health assessment to  | September 2023 | Page   2 |
|---|----------------|----------|
| assist with development of cover crop mix |                |          |
| to improve soil health                    |                |          |

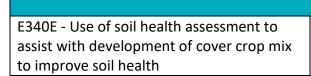

#### **United States Department of Agriculture**

 Grazing plan must be developed to document livestock management. Plan must include at a minimum a forage estimate and livestock inventory for all fields implementing this enhancement that will be grazed. For soil health benefits, utilization by

will be grazed. For soil health benefits, utilization by livestock must be less than 50% of available cover crop forage.

- Before cover crops are grazed, they must have produced enough biomass to allow for grazing while maintaining soil health benefits. Cover crops planted in late fall will not typically be well enough established, however if stands are adequate cover crops may be grazed in the spring prior to termination.
- Different cover crop species have varying tolerances to grazing; this should be taken into consideration when developing cover crop seeding specifications.
- Grazing shall not occur during wet soil conditions.
- Some pesticides have restrictions on grazing following application (up to 18 months). Refer to pesticide labels.

# **Documentation and Implementation Requirements**

## Participant will:

☐ Prior to implementation, provide NRCS with the current and planned crop rotation and field operation(s) used for each crop.

# **United States Department of Agriculture**

|            | Prior to implementation, if livestock are included in the system develop a grazing plan which must document livestock management. Plan must include at a minimum a forage estimate and livestock inventory for all fields implementing this enhancement that will be grazed. For soil health benefits, utilization by livestock must be less than 50% of available cover crop forage.  |  |
|------------|--|--|
|            | During implementation, cover crops must not be burned or harvested.  |  |
|            | During implementation, <u>if livestock are included in the system</u> maintain records of forage utilization.  |  |
|            | During implementation, notify NRCS of any planned changes in crops, crop rotation, or unharvested areas to verify the planned system meets the enhancement criteria.   |  |
|            | After implementation, if changes to the cover crop and crop rotation were made, complete the tables above to document the applied Cover Crop for the contract period and provide to NRCS.  |  |
|            | After implementation, <u>if livestock are included in the system</u> provide grazing plan and forage utilization records to NRCS for review to verify additional criteria of the enhancement were met.   |  |
|            | After implementation, provide soil health assessment results and any documentation of changes made to NRCS for review to verify implementation of the enhancement.   |  |
| NRCS will: |  |  |
|            | As needed, provide technical assistance in selecting cover crop mixes for the crop rotations or substitute species that would meet the criteria of the enhancement.  |  |
|            | As needed, provide additional assistance to the participant as requested.  |  |
|            | Prior to implementation, provide and explain the current <a href="NRCS Cover Crop Termination">NRCS Cover Crop Termination</a> <a href="Guidelines.">Guidelines.</a>   |  |
|            | Prior to implementation, use information provided from the participant to calculate the management Soil Conditioning Index (SCI) and Organic Matter (OM) sub factor value over the life of the rotation using current NRCS Soil Conditioning Index (SCI) procedure. Cover crop must increase SCI and OM sub factor from the current/benchmark condition and SCI value must be 0 or greater and have a positive trend in OM sub factor over the life of the rotation. |  |
|            | Benchmark Management SCI =, Benchmark Management OM sub factor =   |  |
|            |  |  |

### **WASHINGTON SUPPLEMENT TO**

# CONSERVATION STEWARDSHIP PROGRAM

#### **CONSERVATION ENHANCEMENT ACTIVITY**

#### **E340E**

#### **Additional Criteria for Washington**

- In addition to the criteria specified in the National job sheet E340 the following additional criteria apply in Washington:
  - If using plants/crops that have not been historically proven in the county the participant must be working with LGU, extension, and/or conservation districts.
     Consult Area or State Specialist if further cover crop assistance is needed.
  - Seeding rate for geographical areas with less than 14" precipitation will target 10 to 15 seeds per sq ft. Geographical areas with greater than 14" precipitation will target 20 to 30 seeds per sq ft.
  - Use the following resources to select cover crops appropriate for your climate, cropping system and enhancement purpose.
    - PNW Cover Crop Selection Tool
       https://www.nrcs.usda.gov/wps/portal/nrcs/detail/plantmaterials/te chnical/toolsdata/plant/?cid=nrcseprd894840
