

CONSERVATION ENHANCEMENT ACTIVITY

CONSERVATION STEWARDSHIP PROGRAM

E386B

Enhanced field borders to increase carbon storage along the edge(s) of a field

Conservation Practice 386: Field Border

APPLICABLE LAND USE: Crop (Annual & Mixed); Crop (Perennial);

Associated Ag Land

RESOURCE CONCERN: Soil

ENHANCEMENT LIFE SPAN: 10 years

Enhancement Description:

Enhance existing field borders to a width of at least 30 feet and establish a single species or mixture of species that provide a dense ground cover and dense rooting system along the edge(s) of the field.

Criteria:

- Field borders shall be established along selected field edges at a width of at least 30 feet.
- Locate borders to eliminate sloping end rows, headlands, and other areas where concentrated water flows will enter or exit the field.
- Field borders shall be established to adapted species of permanent grass, forbs and/or shrubs that accomplish the design objective.
- Establish plant species that will produce adequate above- and below-ground biomass for the site.
- Maximize the width and length of the herbaceous border to fit the site and increase total biomass production.

E386B - Enhanced field borders to increase	July 2019	Page 1
carbon storage along the edge(s) of a field		

- Do not burn the field border
- Do not disturb the roots of the established vegetation with tillage.

- Plants selected for field borders will have the physical characteristics necessary to
 produce adequate round cover and dense rooting system. No plant listed by the
 state as a noxious or invasive species shall be established in the field border.
- Seedbed preparation, seeding rates, dates, depths, fertility requirements, and planting methods will be consistent with approved local criteria and site conditions.
- Ephemeral gullies and rills present in the planned border area will be eliminated as part of seedbed preparation. If present, ephemeral gullies and rills located immediately upslope from the planned border area need to be treated to ensure more of a sheet flow into the planned border area.
- Operation and maintenance requirements:
 - Repair storm damage.
 - Remove sediment from above, within and along the leading edge of the field border when accumulated sediment either alters the function of the field border or threatens the degradation of the planted species.
 - Shut off sprayers and raise tillage equipment to avoid damage to field borders.
 - Shape and reseed border areas damaged by animals, chemicals, tillage, or equipment traffic.
 - Do not use the field border as a hay yard or machinery parking lot for any extended period of time, especially if doing so will damage or impair the function of the field border.
 - Maintain desired vegetative communities and plant vigor by liming, fertilizing, mowing, disking, or burning and controlling noxious and invasive weeds to sustain effectiveness of the border.
 - Repair and reseed ephemeral gullies and rills that develop in the border.
 - When managing for wildlife, maintenance activities that result in disturbance of vegetation should not be conducted during the primary nesting, fawning and calving seasons. Activities should be timed to allow for regrowth before the growing season ends whenever possible.

E386B - Enhanced field borders to increase	July 2019	Page 2
carbon storage along the edge(s) of a field		

 Periodic removal of some products such as medicinal herbs, nuts, and fruits is permitted provided the conservation purpose is not compromised by the loss of vegetation or harvesting disturbance.

- o Avoid vehicle traffic when soil moisture conditions are saturated.
- o Maintain records of the field border maintenance as needed by the land user.

Documentation and Implementation Requirements:

CONSERVATION

NRCS will:

CONSERVATION STEWARDSHIP ☐ Prior to implementation, verify the enhancement is **PROGRAM** planned within the field(s) or farm boundary. Prior to implementation, provide and explain NRCS Conservation Practice Field Border (Code 386) as it relates to implementing this enhancement. ☐ Prior to implementation, verify the enhancement is planned for acres that have been appropriately prepared for vegetation establishment. Total planned amount of field border extension = feet ☐ Prior to implementation, verify no plants on the Federal or state noxious weeds list are included. ☐ As needed, prior to implementation, NRCS will provide technical assistance: o Planning site preparation meeting NRCS Conservation Practice Standard Field Border (Code 386). Selecting the adapted species of permanent grass, forbs and/or shrubs that accomplish the design objective and are best suited to site conditions. Selecting planting techniques and timing appropriate for the site and soil conditions. o Planning the use of additional erosion control, as needed for the site. Preparing specifications for applying this enhancement for each site using approved state implementation requirements, national technical notes, appropriate state technical notes, and narrative statements in the conservation plan, or other acceptable documentation. During implementation, evaluate any planned changes to verify they meet the enhancement criteria. ☐ After implementation, verify the vegetation was established to specifications developed for the site.

carbon storage along the edge(s) of a field		

☐ After implementation, verify the planting is protected from pests and fire.

	After implementation, verify all erosion control needed for the site is functioning and is mainta specifications developed for the site.				
	After implementation, verify the total amount of field border implemented. Total implemented amount of field border extension =feet
