

CONSERVATION ENHANCEMENT ACTIVITY

CONSERVATION STEWARDSHIP PROGRAM

E314A

Brush management to improve wildlife habitat

Conservation Practice 314: Brush Management

APPLICABLE LAND USE: Pasture, Range, Forest, Associated Ag Land

RESOURCE CONCERN: Plants; Animals

ENHANCEMENT LIFE SPAN: 10 years

Enhancement Description

Brush management is employed to create a desired plant community, consistent with the related ecological site steady state, which will maintain or enhance the wildlife habitat desired for the identified wildlife species. It will be designed to provide plant structure, density and diversity needed to meet those habitat objectives. This enhancement does not apply to removal of woody vegetation by prescribed fire or removal of woody vegetation to facilitate a land use change.

Criteria

- This enhancement will be applied in a manner to achieve the desired control of the target woody species while protecting the desired species through mechanical, chemical, or biological methods, alone or in combination. NRCS will not develop biological or chemical treatment recommendations except for biological control using grazing animals. NRCS may provide clients with acceptable biological and/or chemical control references.
- Identify wildlife species of concern and landscape specific brush habitat functionality that is consistent with the related ecological site steady state or another desired state that will meet the objective.
- Brush management will be planned and applied in a manner to meet the habitat requirements for wildlife species of concern as determined by the state's NRCS Wildlife Habitation Evaluation Guide (WHEG).

CONSERVATION STEWARDSHIP PROGRAM

- Evaluate wildlife habitat with the state NRCS WHEG and manage for a value of 0.60 or greater.
- Brush management will be designed to achieve the desired plant community based on species composition, structure, density, and canopy (or foliar) cover or height.
- Conduct treatments during periods of the year that accommodate reproduction and other life-cycle requirements of target wildlife and pollinator species.

CONSERVATION STEWARDSHIP PROGRAM

Documentation and Implementation Requirements

Participant will:

- Prior to implementation, meet with NRCS to complete the Wildlife Habitat Evaluation Guide (WHEG) evaluation at the site.
- Prior to implementation, determine and write down clear objectives for brush management and implementation of this enhancement.
- Prior to implementation, develop a map delineating the areas to be treated and enrolled in this enhancement.
- During implementation, maintain records of applied treatments (pesticide used, rate applied, timing, etc.) and grazing restrictions. The records must support the label requirements for re-entry or grazing restrictions when applicable.
- After implementation, reassess habitat condition with NRCS using the WHEG.
- After implementation, provide records for review by NRCS to verify enhancement was implemented to meet criteria.

NRCS will:

As needed, provide technical assistance to participant as requested.

- Prior to implementation, provide and explain NRCS Conservation Practice Standard Brush Management (Code 314) as it relates to implementing this enhancement.
- Prior to implementation, confirm brush management and grazing management plan objectives clearly identify the wildlife of concern for the area.
- Prior to implementation, meet with participant to complete WHEG evaluation at the site.

Existing WHEG score = _____ Planned Post Implementation WHEG score = _____

- Prior to implementation, NRCS will make cover or density measurements at georeferenced transects on key areas within the treatment area.
- After implementation, NRCS will return to georeferenced area to measure cover or density and report the results.
- After implementation, review records to verify participant implemented enhancement to meet criteria.

CONSERVATION STEWARDSHIP PROGRAM

- After implementation, review record of applied treatment (pesticide used, rate applied, timing, etc.) and grazing restrictions.
- After implementation, reassess habitat condition using the Wildlife Habitat Evaluation Guide.
Post Implementation WHEG score = _____

NRCS Documentation Review:

I have reviewed all required participant documentation and have determined the participant has implemented the enhancement and met all criteria and requirements.

ENHANCEMENT NUMBER AND TITLE:

E314A –Brush Management to Improve Wildlife Habitat

Conservation Practice 314A: Brush Management

BRIEF DESCRIPTION OF ENHANCEMENT: Brush Management to enhance habitat for native wildlife. This enhancement will be used to remove invasive shrubby species from linear edges. Shrubs such as Chinese privet, Japanese privet, chinaberry, Chinese tallow tree, or other similar species encroach on edges and capture sunlight. This prevents herbaceous plants from growing along those edges.

Some important things to note:

- **Eligible Treatment Area:** Any edge between an open area and timberland that has thick, shrubby brush preventing sunlight from penetrating the edge.
- This practice is applicable where invasive brush species are encroaching into open edges such as pastures, wildlife openings, roads, firebreaks, or other similar areas.
- Treatment will consist of herbicide application by backpack, utv, tractor or other similar method.
- Choose an herbicide that will remove target species without damaging trees in the overstory. Be cautious of soil active herbicides in that setting.
- Follow herbicide label directions.

ATTACH COPIES OF REQUIRED DOCUMENTS AS NOTED BY THE ENHANCEMENT JOB SHEET. CHECK THE BOX OR OTHERWISE IDENTIFY THE SUPPORTING DOCUMENTATION.

- MAPS OF THE AREA or LOCATION(S) WHERE THIS PRACTICE WAS APPLIED
- HERBICIDE INVOICE SHOWING TYPE AND AMOUNT PURCHASED FOR THIS PRACTICE.
- REPRESENTATIVE DIGITAL IMAGES/PHOTOS OF THE AREA AND INDICATE AREA ON MAP
- DATES OF COMPLETED ACTIVITY

The attached documents support the full implementation of this Conservation Stewardship Enhancement.
