Florida's Partners for Fish and Wildlife (PFW)
and Coastal Program (CP) Boundaries

Esri, HERE, Garmin, (c) OpenStreetMap contributors, and the GIS user community

- Both programs work with willing partners to conserve, manage, and restore habitat by providing technical and financial assistance to landowners and producers complimenting Farm Bill conservation programs **with an emphasis on listed species recovery and the avoidance of additional species listings.**
- The latest version of the [At-Risk Species Finder](#), a tool that provides the public and state partners a way to find At-Risk species and help inform management decisions, was recently released. This finder also provides opportunities to explore other information on these species and to promote collaborative pro-active conservation.
- **PFW covers private lands** (non-federal or state) / **CP covers public and private lands.**
- PFW projects have a minimum 10-year commitment ensuring work is maintained.
- CP can provide both technical and financial assistance for third-party land acquisitions to protect habitat.
