Question	Answer Choices	Points

Question	Answer Choices	Points
	Multiple species, including a Federally threatened, endangered, or candidate species, as well as State SWAP Teir 1 and/or 2 species and/or pollinators	60
Does the application directly address limiting habitat factors for:	Federally threatened, endangered, or candidate species	50
	State endangered, threatened, and species of concern (SWAP Tier 1 Species), and/or pollinators.	40
	CO SWAP Tier 2 Species and game species of economic importance (elk, mule deer, pheasant, quail, waterfowl, native/naturalized trout)	20
	all other species	0
	WHEG score increase of 0.4 or greater, or other method of habitat evaluation indicates the application will significantly improve or restore habitat conditions for the target species, group of species, or ecological site (terrestrial or aquatic).	60
The application's Habitat Evaluation (WHEG/SVAP2/CPW Habitat scorecard) score improvement indicates the likely habitat benefits fo target species is:	WHEG score of 0.2-0.3, or other method of habitat evaluation indicates the application will improve habitat conditions for the target species, group of species, or ecological site (terrestrial or aquatic).	40
	WHEG score of 0.1, or other method of habitat evalution indicates the application will minimally improve habitat for the target species, group of species, or ecological site (terrestrial or aquatic).	20
	0 indicates no habitat improvement.	0
	Yes, the application removes significant barriers to wildlife movement within the target species core range (ex. removal of non-wildlife friendly fencing, in-stream or channel barriers) habitat/riparian buffer planting or brush management, or restoration of rare/declining natural community, etc.)	60
Does the application increase habitat connectivity for the target species?	Yes, the application is near target species habitat (<2 miles) and improves habitat patch size and/or quality (ex. brush management, tree planting, wet meadow restoration, riparian protection, conservation cover, etc.)	40
	Yes, the application improves habitat quality through improved land/wetland management (ex. livestock grazing, weed treatment, streambank protection, wildlife habitat management, etc.)	20
	The application does minimal for habitat connectivity because it is isolated from the target species core range and outside the target species normal daily movement range.	0
