

Increased Financial Assistance for Source Water Protection

Working lands can be key to protecting clean drinking water We can help!

Agriculture is a vital part of our infrastructure and so is our drinking water. The Natural Resources Conservation Service (NRCS) is working to prioritize land and water conservation practices on private working lands. These practices provide many benefits, including protecting public and private drinking water supplies.

Farmers and landowners in any of the priority watersheds shown on the map may be eligible to receive increased financial assistance from the following Farm Bill conservation programs:

- Environmental Quality Incentives Program (EQIP)
- Regional Conservation Partnership Program (RCPP)

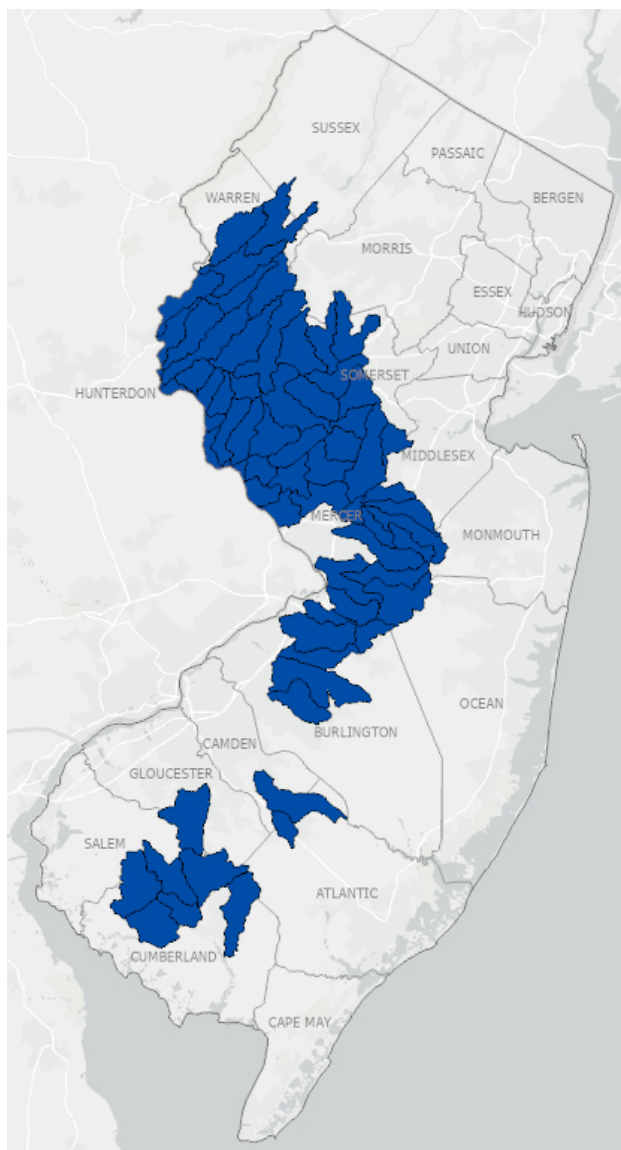

NRCS NJ is providing 10 percent of Farm Bill program funding for this initiative and is now accepting SWP applications.

Eligible conservation practices may address groundwater or surface water protection, or both. A list of eligible practices is shown to the right.

Farmers who implement these conservation practices within the priority watersheds can receive an additional 15% payment incentive rate.

NRCS field office staff can assist in determining if your application is eligible for SWP priority area financial assistance.
