

CONSERVATION ENHANCEMENT ACTIVITY

E376A

Modify field operations to reduce particulate matter

Conservation Practice 376: Field Operations Emissions Reductions

APPLICABLE LAND USE: Crop (Annual & Mixed); Crop (Perennial)

RESOURCE CONCERN: Air

ENHANCEMENT LIFE SPAN: 1 year

Enhancement Description

Modify tillage and/or harvest operations to reduce particulates by at least 20 percent below the required levels.

Criteria

- There must be a demonstrated reduction by at least 20 percent in particulate matter (PM) emissions from the benchmark (current system) to the planned system by using one or more of the techniques below:
 - Combined Tillage Operations—Utilize equipment that allows multiple operations in a single pass to reduce the number of field passes per crop rotation.
 - Precision Guidance Systems—To reduce total soil disturbance, use global positioning system (GPS) and steering technologies that minimize overlap of field passes.
 - Alternative Equipment Technology—Use alternative equipment and/or equipment retrofits that reduce PM emissions. This can include dust-reducing technology (such as misters, deflectors, etc.) increasing equipment size to reduce net field passes, and changes to bed/row size or spacing.

 Timing of Field Operations—Modify the timing of field operations so that PM emissions are reduced. This can include conducting operations when relative humidity and/or soil moisture levels

CONSERVATION STEWARDSHIP PROGRAM

- are higher, winds are lighter, or by limiting operations during high-wind events. This could also include a reduction in the amount of time between seedbed preparation and planting, and other such timing modifications that reduce PM emissions.
- Modify Crop Cultural and Harvest Methodologies—Modify operations to use other means of crop production such as performing soil disturbance and/or harvest operations at slower speeds. For example, harvesting a forage crop without allowing it to dry in the field, hand harvesting, applying water or other soil stabilizing material prior to soil disturbance or harvest, using transplants instead of direct seeding, and applying chemicals and fertilizers via irrigation to reduce field passes.
- For applicable mechanical nut harvest operations manage pre-harvest irrigation
 water to create a more consolidated and firm soil surface to reduce harvest-related
 PM emissions.

<u>Documentation and Implementation Requirements</u> Participant will:

☐ Prior to implementation, complete the table for all current/benchmark field operations or activities.

ield:		Acres:						
Current/Benchmar		List ALL Current/Bench			Fie	_	ration or Act	ivity
Crops in Rotation	1	Operations or Activities f	for each crop			Timi	ing (month)	
☐ Prior to in	nnleme	ntation, complete the t	able for plan	ned fi	eld or	peratio	ns or activ	ities
