# Water and Climate Update

August 14, 2025

The Natural Resources Conservation Service (NRCS) produces this weekly report using data and products from the [National Water and Climate Center](#) and other agencies. The report focuses on seasonal snowpack, precipitation, temperature, and drought conditions in the U.S.

Precipitation .....	2	Other Climatic and Water Supply Indicators .....	9
Temperature.....	5	More Information.....	14
Drought .....	6		

## U.S. climate assessment released for July 2025

The National Oceanic and Atmospheric Administration (NOAA) recently released a climate report highlighting climate anomalies observed throughout the U.S. during July 2025. Excerpts from the report include:

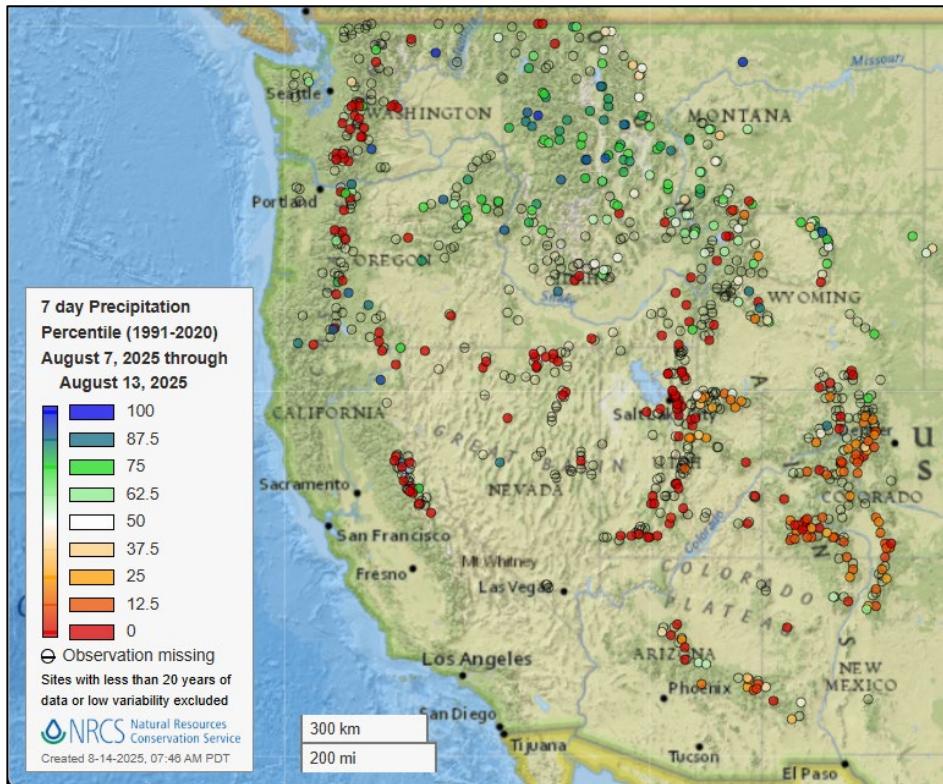

- Warm overnight minimum temperatures set July records, impacting more than 55 million people across the eastern states.
- The average temperature for the contiguous U.S. (CONUS) in July 2025 was 75.4°F, 1.8°F above the 20th-century average, ranking in the warmest third of the 131-year record.
- In July, 1,434 flash flood warnings—the second-highest July total in 40 years—and 17 flash flood emergencies were issued nationwide, along with over 2,000 preliminary flood-related storm reports.
- Most notably, catastrophic flooding in the Texas Hill Country in early July resulted in at least 135 fatalities, following extreme rainfall of up to 20 inches over just a few days.

The data cutoff for Drought Monitor maps is each Tuesday at 8 a.m. EDT. The maps, which are based on analysis of the data, are released each Thursday at 8:30 a.m. Eastern Time.

### Intensity and Impacts

None  
D0 (Abnormally Dry)

D1 (Moderate Drought)  
D2 (Severe Drought)

D3 (Extreme Drought)  
D4 (Exceptional Drought)

No Data

~ - Delineates dominant impacts

S - Short-term impacts, typically less than 6 months (agriculture, grasslands)

L - Long-term impacts, typically greater than 6 months (hydrology, ecology)

SL - Short- and long-term impacts

### [Current National Drought Summary, August 12, 2025](#)

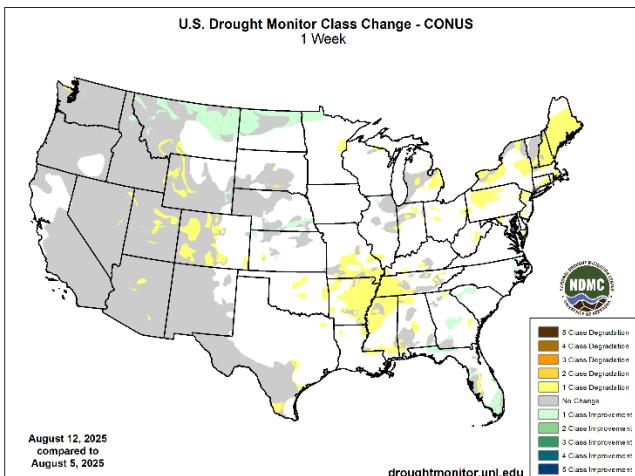

Source: National Drought Mitigation Center

"Intensifying short-term rainfall shortages led to expanding and intensifying dryness and drought over much of the Lower Mississippi Valley, Ohio Valley, Tennessee Valley, Northeast, and parts of the Deep South, southern Plains, central Arizona, and the central Rockies. Meanwhile, a second consecutive week with moderate to heavy precipitation led to areas of improvement in the South Atlantic States from the Carolinas through Florida, across northern reaches of the Rockies and Plains, and over parts of the central Great Plains. The heaviest amounts (8 to 11 inches) doused areas in southeast Wisconsin from central Washington and Ozaukee Counties southward through much of north and central Waukesha and Milwaukee Counties. Meanwhile, 6 to 8 inches were dropped on a broader section of southeast Wisconsin as well as a few patches across southeast South Dakota, the Carolinas Piedmont and adjacent southern Appalachians, the coastal Carolinas, north-central Florida, the central Florida Peninsula, and interior southeast Florida."

### Agricultural Weather Highlights

Author: Brad Rippey, Agricultural Meteorologist, USDA/OCE/WAOB

**National Outlook, Thursday August 14, 2025:** "With a ridge of high pressure moving eastward, the focus for extreme heat has temporarily shifted to the nation's mid-section, where today's high temperatures will top 100°F as far north as South Dakota. Subsequently, heat will linger into next week across the central and southern Plains and spread into the mid-South, while a surge of cooler air will overspread the North. Meanwhile, the re-establishment of the Southwestern monsoon circulation and subsequent interaction with Northern cold fronts will result in "ring of fire" thunderstorms, extending from the Four Corners States into the northern Plains, upper Midwest, and Great Lakes region. Five-day rainfall totals could reach 2 to 6 inches or more in the upper Great Lakes region and neighboring areas. Elsewhere, spotty but locally heavy showers will continue in the Southeast, while precipitation could provide some drought relief in the Pacific Northwest. The NWS 6- to 10-day outlook for August 19 – 23 calls for the likelihood of near- or above-normal temperatures and rainfall across most of the country. Cooler-than-normal conditions will be confined to the Northeast and portions of the Great Lakes region, while drier-than-normal weather should be limited to parts of the Northwest and an area stretching from the Great Lakes States into northern New England."

### Weather Hazards Outlook: [August 16 – 20, 2025](#)

Please exercise caution using this outlook during the weekend.

Precipitation	<input checked="" type="checkbox"/>
Temperature	<input checked="" type="checkbox"/>
Wildfires	<input checked="" type="checkbox"/>
Soils	<input type="checkbox"/>
Flooding	<input type="checkbox"/>

Legend	
Flooding Likely	Hazardous Heat
Flooding Occurring or Imminent	Hazardous Cold
Flooding Possible	Frost/Freeze
Freezing Rain	High Winds
Heavy Precipitation	Significant Waves
Heavy Rain	Critical Wildfire Risk
Heavy Snow	Severe Weather

Valid August 16, 2025 - August 20, 2025

## Seasonal Drought Outlook: [August 1 – October 31, 2025](#)

Source: National Weather Service

### U.S. Seasonal Drought Outlook Drought Tendency During the Valid Period

Valid for August 1 - October 31, 2025  
Released July 31, 2025

Consistency adjustment  
based on Monthly  
Drought Outlook for  
August 2025

Depicts large-scale trends based on subjectively derived probabilities guided by short- and long-range statistical and dynamical forecasts. Use caution for applications that can be affected by short lived events. "Ongoing" drought areas are based on the U.S. Drought Monitor areas (intensities of D1 to D4).

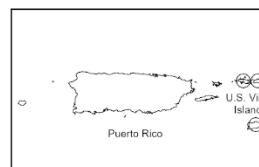

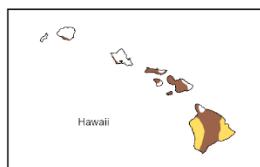

NOTE: The tan areas imply at least a 1-category improvement in the Drought Monitor intensity levels by the end of the period, although drought will remain. The green areas imply drought removal by the end of the period (D0 or none).

- Drought persists
- Drought remains, but improves
- Drought removal likely
- Drought development likely
- No drought
